# Natural Hazards Mitigation Plan

September 2020

# Fayette County, Ohio

# **Natural Hazards Mitigation Plan**

# Updated September 2020

# **Table of Contents**

| Executive Summary  | 1  |
|--|----|
| Section I – Introduction   | 3  |
| A. Background & Purpose  | 3  |
| B. Scope   |    |
| C. Project Management  | 3  |
| D. Relationship to the Mitigation Plan Approved in 2015                    | 3  |
| E. The Mitigation Planning Process   | 3  |
| F. Integration of Results into Other Mechanisms                            |    |
| G. Other Uses for This Plan  | 4  |
| H. Sources Consulted   | 4  |
| I. Mitigation Action Changes as a Result of This Update                    | 5  |
| J. Progress Made   | 6  |
| K. Plan Organization   |    |
| Section II – The Planning Process  | 7  |
| A. Inform and Involve Chief Elected Officials, Stakeholders and the Public |    |
| B. Form the Planning Team  |    |
| C. Identify Participating Agencies   | 7  |
| D. Hold Meetings   |    |
| 1. Kick-Off Meeting  | 9  |
| 2. Planning Meeting for Hazards  | 9  |
| 3. Planning Meeting for Goals & Actions                                    | 9  |
| 4. Other Information Exchange  | 9  |
| E. Gather Information  |    |
| F. Draft the Updated Plan  | 9  |
| 1. Update Community Profile and Assets                                     | 9  |
| 2. Perform Hazard Analysis, Formulate Goals and Mitigation Actions         | 9  |
| a. Hazard Identification   |    |
| b. Hazard Profile, Vulnerability Assessment & Impacts                      | 10 |
| c. Goals & Mitigation Actions  | 10 |
| d. Draft Plan  | 11 |
| G. Submit Plan to Ohio EMA and FEMA  | 11 |
| H. Adopt Plan  |    |
| I. Present Plan to the Public  | 12 |
| J. Monitor Plan Implementation   |    |
| K. Keep Plan Up to Date  | 12 |
| Section III – Community Profile and Assets                                 | 13 |
| A. Location and Geography  | 13 |
| B. Land Use  |    |
| 1. Land Use/Land Cover   |    |
| 2. Major Waterways   |    |
| 3. State Lands   |    |
| C. Climate   |    |
| D. Jurisdictions and Populations   | 15 |

| E. Demographics   | 16 |
|---|----|
| F. Congregate Care Populations                              |    |
| G. Major Community Events                                   | 17 |
| H. Structures Types and Values                              | 17 |
| I. Major Transportation Routes                              | 17 |
| 1. Highways   | 17 |
| 2. Airways  | 18 |
| 3. Railways   | 18 |
| J. Development Trends                                       |    |
| 1. Land Usage   |    |
| 2. Economic Conditions                                      |    |
| K. Public Warning and Notifications Systems                 |    |
| 1. NOAA Weather Radio All Hazards                           |    |
| 2. Outdoor Warning Sirens                                   |    |
| 3. Public Safety Notification System                        | 18 |
| L. Authorities Affecting Mitigation Activities              | 18 |
| 1. Zoning and Building Regulations                          |    |
| Floodplain Management                                       |    |
| National Flood Insurance Program (NFIP)                     |    |
| 4. Fayette County Health Department                         |    |
| M. Mitigation Funding Sources                               |    |
| 1. Operating Budgets  |    |
| 2. Grants   |    |
| a. Community Development Block Grant Program                |    |
|   |    |
| b. Hazard Mitigation Grant Program                          |    |
| c. Pre-Disaster Mitigation Program                          |    |
| d. Flood Mitigation Assistance Program                      |    |
| e. Other Mitigation Grants                                  |    |
| Section IV – Hazard Identification and Analysis             |    |
| A. Overview   |    |
| B. Hazard Identification                                    |    |

| Review Benefits and Costs  | 69    |
| 2. Prioritize Actions  | 69    |
| Section VII – Mitigation Action Identification & Analysis  | 73    |
| A. Goal: Reduce or eliminate impact of hazards on public safety, lives, property and               |       |
| infrastructure   | 73    |
| 1. Action: Control surface stormwater to alleviate flooding by installing/upgrading exis           | sting |
| detention basins, landscaping to route stormwater away from roads and structures,                  | •     |
| installing/upgrading storm sewers  | 73    |
| 2. Action: Develop and implement a tree trimming program to help prevent damage f                  |       |
| falling limbs.   |       |
| 3. Action: Mitigate water and wastewater treatment facilities located in flood hazard a            | reas. |
|  |       |
| 4. Action: Mitigate structures at risk   |       |
| 5. Action: Rehabilitate dams known to be of high hazard potential                                  |       |
| 6. Action: Update dam Emergency Action Plans; update inundation data for dams with                 |       |
| EAPs or no current inundation data   |       |
| 7. Action: Upgrade water treatment plant carbon process and upgrade disposal                       |       |
| ,  |       |
| 8. Action: Increase the size of sewage lagoons to reduce probability of overflow                   |       |
| B. Goal: Provide timely warning  |       |
| 1. Action: Install/upgrade outdoor warning sirens  |       |
| 2. Action: Provide NOAA All-Hazards Warning Radios for all critical facilities                     |       |
| C. Goal: Enhance emergency response capability   |       |
| Action: Establish a series of dry hydrants throughout the county                                   |       |
| <ol><li>Action: Construct additional water storage facility for emergency crop managemen</li></ol> |       |
| fire suppression.  | 80    |

| D. Goal: Plan for safe development  | 81  |
|---|-----|
| 1. Action: Partner with local environmental groups to make best use of areas prone to     |     |
| flooding that cannot be built upon  |     |
| 2. Action: Review and update laws and regulations to limit development in at risk areas   |     |
| and require minimum safe standards for structures   |     |
| 3. Action: Update the County Land Use Document to place greater restrictions on what      | •   |
| can be built within the floodplain and to suggest many suitable alternative locations for | ~~  |
| mobile homes.   |     |
| 4. Action: Request update of Digital Flood Insurance Rate Maps (DFIRMS)                   | 82  |
| safe rooms in new schools, daycares, and nursing homes. Encouraging the construction      | n   |
| and use of safe rooms in homes and shelter areas of manufactured home parks,              | 11  |
| fairgrounds, shopfairgrounds, shop  | 83  |
| 6. Action: Review, revise and adopt policies/ordinances to improve stormwater             | 00  |
| management.   | 83  |
| E. Goal: Create self sufficiency  |     |
| 1. Action: Identify/upgrade facilities to be shelters                                     |     |
| 2. Action: Install back-up generators for shelters and critical facilities                | 84  |
| 3. Action: Identify alternate potable water sources and develop a distribution system     |     |
| 4. Action: Develop a warehousing system for storing essential disaster supplies           |     |
| 5. Action: Provide designated locations/facilities to house displaced animals             |     |
| 6. Action: Develop and implement a volunteer management program                           |     |
| 7. Action: Construct community safe rooms.  |     |
| 8. Action: Construct residential safe rooms.  |     |
| F. Goal: Increase public awareness  |     |
| 1. Action: Develop and implement an all-hazards public education program                  |     |
| Section VIII – Supplemental Information   |     |
| B. Meetings, Announcements and Correspondence   |     |

# **Executive Summary**

The Fayette County Mitigation Plan lays the road map to a safer community by identifying the natural hazards that may affect the county, assessing the impacts of these hazards on community assets – those things that are important to the residents of the county – and developing mitigation actions to lessen or eliminate the impacts on community assets.

Having a current mitigation plan allows the county to apply for mitigation funding – as it may become available. It also provides a mitigation action list for other sources of funding. Further, it provides information that may be used in other planning efforts and future development.

Through a quantitative process of analyzing hazards and impacts on our community, the Mitigation Planning Team identified six mitigation goals and developed twenty-seven mitigation actions to achieve the goals. Of these actions, thirty-seven actions were carried over from the previous plan, four actions were added, five actions were identified as being completed, and twelve actions were deleted.

The following summarizes these efforts:

- Hazards Identified and Analyzed in Rank Order
  - Severe Winter Storms
  - Pandemic
  - Severe Summer Storms
  - Power Outage
  - Tornadoes
  - Hazardous Material Release
  - Dam Failure
  - Cyber Attack
  - Droughts
  - Flooding
  - Earthquakes
  - Land Subsidence
- Goals Identified and Mitigation Actions Developed, Analyzed and Prioritized
  - Reduce or eliminate impact of hazards on public safety, lives, property and infrastructure
    - Identify and map existing critical culverts and storm drainage ditches near residential areas, roadways and low-lying areas throughout the county.
    - Install warning signage along roadways that are susceptible to flooding.
    - Repair and replace bridges and levees that suffer damage from storm water.
    - Elevate roads above base flood elevations.
    - Install new infrastructure in areas susceptible to low level flooding and ponding, outside of the 100-year floodplain.
    - Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.
    - Develop and implement a tree trimming program to help prevent damage from falling limbs.
    - Protect and restore natural flood mitigation features such as riverbanks, riparian buffers and vegetative buffers.
    - Relocate or retrofit critical facilities located within floodplains.
    - Mitigate water and wastewater treatment facilities located in flood hazard areas.
    - Mitigate structures at risk
    - Provide means for mass animal carcass disposal.
    - Rehabilitate dams known to be of high hazard potential.
    - Update dam Emergency Action Plans; update inundation data for dams without EAPs or no current inundation data
    - Upgrade water treatment plant carbon process and upgrade disposal.

Executive Summary Page 1

- Increase the size of sewage lagoons to reduce probability of overflow.
- Provide timely warning
  - Implement a reverse-flow emergency notification system. Completed
  - Install/upgrade outdoor warning sirens. Unchanged
  - Provide NOAA All-Hazards Warning Radios for all critical facilities. Unchanged
  - Upgrade the public safety countywide radio communications system. Completed
  - Enhance emergency response capability
  - Establish a series of dry hydrants throughout the county. Unchanged
  - Construct additional water storage facility for emergency crop management and fire suppression. Unchanged
  - Partner with local environmental groups to make best use of areas prone to flooding that cannot be built upon.
- Plan for safe development
  - Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures.
  - Update the County Land Use Document to place greater restrictions on what can be built within the floodplain and to suggest many suitable alternative locations for mobile homes. Unchanged
  - Request update of Digital Flood Insurance Rate Maps (DFIRMS). Unchanged
  - Encourage the Villages of Bloomingburg and Octa to participate in the National Flood Insurance Program.
  - Participate in the National Flood Insurance Program's (NFIP) Community Rating System (CRS).
  - Form partnerships to support floodplain management and environmental conservation between local, state and regional entities.
  - Develop notification platform for people to report potential land subsidence or sinkhole development.
  - Promote the construction and use of safe rooms by requiring construction of safe rooms in new schools, daycares, and nursing homes. Encouraging the construction and use of safe rooms in homes and shelter areas of manufactured home parks, fairgrounds, shop
  - Inspect utility poles to ensure they meet specifications and are wind resistant; bury power lines
  - Review, revise and adopt policies/ordinances to improve stormwater management.
- Create self sufficiency
  - Identify/upgrade facilities to be shelters.
  - Develop and maintain a system to identify vulnerable populations.
  - Install back-up generators for shelters and critical facilities.
  - Identify alternate potable water sources and develop a distribution system.
  - Identify facilities for use as temporary facilities for patients with non-life-threatening conditions to alleviate the overloading of medical facilities.
  - Develop a warehousing system for storing essential disaster supplies.
  - Provide designated locations/facilities to house displaced animals.
  - Develop and implement a volunteer management program.
  - · Construct community safe rooms.
  - · Construct residential safe rooms.
- Increase public awareness
  - Develop and implement an all-hazards public education program.

This plan will be reviewed and updated annually and undergo a complete review and rewrite within five years of adoption. Please address any questions, comments, mitigation action status or additional mitigation actions to the Fayette County Emergency Management Agency.

Executive Summary Page 2

### Section I – Introduction

# I. Background & Purpose

There are two basic truths about hazards and community assets:

- Hazards will occur there is little, if anything, we can do to prevent natural hazards from occurring.
- Community assets will be impacted by the occurrence of hazards to the extent of the assets' vulnerabilities to the hazards' effects.

Mitigation seeks to lessen or eliminate:

- The impact of hazards
- The vulnerability of assets to hazard impacts

As there are many impacts on community assets, impacts are ranked and mitigation actions cost-estimated using a quantitative analysis approach. Mitigation Actions may then be implemented in a cost-effective manner that resolves the greatest impact.

The purpose of this plan is to document the mitigation planning process conducted in Fayette County, Ohio, and provide that road map to a safer community.

# II. Scope

This plan covers Fayette County, Ohio, and all its political subdivisions and municipalities.

# **III. Project Management**

The Fayette County Emergency Management Agency (EMA) is the lead agency for this plan. RDI Solutions LLC was contracted to perform research, facilitate the process and assemble the plan to conform with the requirements of the Ohio Emergency Management Agency (Ohio EMA) and the Federal Emergency Management Agency (FEMA).

# IV. Relationship to the Mitigation Plan Approved in 2015

As this is an updated plan, the previously approved plan was the point of departure. All information in it was reviewed and updated as needed.

# V. The Mitigation Planning Process

The Fayette County Mitigation Planning Team worked together to update the 2015 Plan. The team used the Federal Emergency Management Agency's (FEMA) *Local Mitigation Planning Handbook – March 2013*, as a guide.

Mitigation planning starts with profiling the community and identifying its assets – those things that are important to it. Next, hazards that potentially may affect these community assets are profiled – past and projected future occurrences and impacts. Then, mitigation actions are reviewed and updated and new ones developed that can either lessen or eliminate the impact of a hazard or the vulnerability of a community asset to the impact of a hazard are developed. These mitigation actions form the basis for making the community a safer place to live, work and recreate.

Throughout the process, those who have a stake – elected and appointed government officials, agencies providing services to people, the public – as well as those with pertinent information are advised, consulted and their input incorporated into the plan. Section II – The Planning Process describes and summarizes the results of this process.

# VI. Integration of Results into Other Mechanisms

The county's process to integrate the data, information, and hazard mitigation goals and actions in other planning mechanisms is accomplished through specifically including select

positions in the planning process and are members of the Mitigation Planning Team. These include, but are not limited to:

- Fayette County Commissioners consider incorporating mitigation actions when approving and funding county development projects.
- Fayette County and Municipal Floodplain Administrators use the results of flooding hazard analysis and vulnerability assessments in refining floodplain regulations.
- Fayette County Planning Commission use hazard analysis in approving land use proposals.
- Fayette County Emergency Management Agency (EMA) use hazard analysis in focusing preparedness, response and recovery efforts on areas of higher risk.
- Fayette County Sheriff's Office use hazard analysis targeting response efforts in areas of higher risk for impending or ongoing incidents.
- Fayette County Engineer's Office use mitigation actions in performing maintenance or making repairs to lessen or eliminate damages caused by future hazard occurrences.
- Municipal Mayors and Councils consider incorporating mitigation actions when approving and funding development and maintenance projects.

These individuals take information to their respective organizations that are charged with the development, maintenance, and on occasion, enforcement of rules, regulations, codes, ordinances, policies, plans, procedures and other administrative instruments. Information from the mitigation planning effort is presented to the leadership of these organizations, who then authorize the information to be added, to revise or update current administrative instruments. This allows for oversight, commitment of time, energy, and resources to change actions into projects.

### VII. Other Uses for This Plan

While this plan focuses on mitigation actions, the results of the information gathered and analysis performed can be used for other purposes including:

- Already-identified mitigation actions for funding through other sources
- Assessing risk for other purposes

### VIII. Sources Consulted

Many sources were consulted in the planning process. The major sources are shown in the following table.

| Source   | Used to Provide Information on  |
|--|---|
| Federal Emergency Management Agency (FEMA)   | National Flood Insurance Program Previous Disasters                           |
| National Oceanic and Atmospheric Administration (NOAA)                                     | Hazards U.S. Multi-Hazard<br>Climate, Weather & Drought History and Trends    |
| Ohio Department of Natural Resources (ODNR)  | Dams, Waterways & Drought History and Conditions<br>Landslide Characteristics |
| United States Geological Survey (USGS) & Fayette County Soil & Water Conservation District | Slopes & Soils Affecting Public Safety and County Assets                      |
| Ohio Emergency Management Agency (Ohio EMA)  | Mitigation Plan State-Wide Hazards History and Trends                         |
| Fayette County Emergency Management Agency (EMA)   | Emergency Operations Plan Previous Disasters, Emergencies & Other Incidents   |
| Fayette County Auditor   | Property Values & Types; Property Ownership                                   |
| Fayette County Engineer's Office   | Impacted Roadways and Cost Estimates  |

| Fayette County Sheriff's Office    | Public Safety Impacts: Location, Severity, Frequency |
|------------------------------------|--|
| Fayette County Planning Commission | Planning Regulations and Development Trends          |

# IX. Mitigation Action Changes as a Result of This Update

The following table indicates the status of the actions. Note that the actions in the 2015 plan were not numerically prioritized.

| were not numerically prioritized.   |           |
|---|-----------|
| 2015 Action   | Status    |
| Identify and map existing critical culverts and storm drainage ditches near residential areas, roadways and low-lying areas throughout the county.  | Completed |
| Install warning signage along roadways that are susceptible to flooding.  | Deleted   |
| Repair and replace bridges and levees that suffer damage from storm water.  | Deleted   |
| Elevate roads above base flood elevations.  | Deleted   |
| Install new infrastructure in areas susceptible to low level flooding and ponding, outside of the 100-year floodplain.  | Deleted   |
| Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.  | Unchanged |
| Develop and implement a tree trimming program to help prevent damage from falling limbs.  | Unchanged |
| Relocate or retrofit critical facilities located within floodplains.  | Deleted   |
| Provide means for mass animal carcass disposal.   | Deleted   |
| Protect and restore natural flood mitigation features such as riverbanks, riparian buffers and vegetative buffers.  | Deleted   |
| Mitigate structures at risk   | Unchanged |
| Mitigate water and wastewater treatment facilities located in flood hazard areas.   | Unchanged |
| Implement a reverse-flow emergency notification system.   | Completed |
| Install/upgrade outdoor warning sirens.   | Unchanged |
| Provide NOAA All-Hazards Warning Radios for all critical facilities.  | Unchanged |
| Upgrade the public safety countywide radio communications system.   | Completed |
| Establish a series of dry hydrants throughout the county.   | Unchanged |
| Construct additional water storage facility for emergency crop management and fire suppression.   | Unchanged |
| Review, revise and adopt policies/ordinances to improve stormwater management.  | Unchanged |
| Partner with local environmental groups to make best use of areas prone to flooding that cannot be built upon.  | Unchanged |
| Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures.   | Unchanged |
| Update the County Land Use Document to place greater restrictions on what can be built within the floodplain and to suggest many suitable alternative locations for mobile homes.   | Unchanged |
| Request update of Digital Flood Insurance Rate Maps (DFIRMS).   | Unchanged |
| Form partnerships to support floodplain management and environmental conservation between local, state and regional entities.   | Deleted   |
| Develop notification platform for people to report potential land subsidence or sinkhole development.   | Deleted   |
| Inspect utility poles to ensure they meet specifications and are wind resistant; bury power lines   | Deleted   |
| Promote the construction and use of safe rooms by requiring construction of safe rooms in new schools, daycares, and nursing homes. Encouraging the construction and use of safe rooms in homes and shelter areas of manufactured home parks, fairgrounds, shop | Unchanged |
| Encourage the Villages of Bloomingburg and Octa to participate in the National Flood Insurance Program.   | Deleted   |

| 2015 Action   | Status    |
|---|-----------|
| Participate in the National Flood Insurance Program's (NFIP) Community Rating System (CRS).   | Deleted   |
| Identify/upgrade facilities to be shelters.   | Unchanged |
| Develop and maintain a system to identify vulnerable populations.   | Completed |
| Install back-up generators for shelters and critical facilities.  | Unchanged |
| Identify alternate potable water sources and develop a distribution system.   | Unchanged |
| Identify facilities for use as temporary facilities for patients with non-life-threatening conditions to alleviate the overloading of medical facilities. | Completed |
| Develop a warehousing system for storing essential disaster supplies.   | Unchanged |
| Provide designated locations/facilities to house displaced animals.   | Unchanged |
| Develop and implement a volunteer management program.   | Unchanged |
| Construct community safe rooms.   | Unchanged |
| Construct residential safe rooms.   | Unchanged |
| Develop and implement an all-hazards public education program.  | Unchanged |

### X. Progress Made

As this plan is an update to the 2015 plan, progress can be measured. Four actions have been completed.

# XI. Plan Organization

This plan is organized into the following sections:

<u>Section I – Introduction</u>.

<u>Section II – Planning Process</u>. This section details the planning process; it provides the summary information and conclusions as a result of hazard analysis and details mitigation goals developed.

<u>Section III – Community Profile and Assets</u>. This section provides detailed information about Fayette County and its Assets.

<u>Section IV – Hazard Identification and Analysis</u>. This section lists the hazards likely to affect Fayette County and details the analysis conducted on each. It also summarizes the rankings of hazards and impacts.

<u>Section V – Hazard Profiles, Analyses and Vulnerable Assets</u>. This section documents profiles and analyses conducted. It then details the impacts to vulnerable community assets.

<u>Section VI – Mitigation Goals and Actions</u>. This section lists and details the mitigation goals and actions updated or developed.

<u>Section VII – Mitigation Action Identification & Analysis</u>. This section details each action and its analysis.

<u>Section VIII – Supplemental Information</u>. This section includes information meaningful to the overall plan development but not included in the preceding sections.

# **Section II – The Planning Process**

This section describes and summarizes the steps and actions taken to update the 2015 Fayette County Mitigation Plan. Note that there are hyperlinks to the documentation for mentioned events/actions in Section VIII – Supplemental Information.

### I. Inform and Involve Chief Elected Officials, Stakeholders and the Public

The Fayette County EMA Director met with the Board of County Commissioners on June 3, 2019, advising them of the mitigation plan update project and received their full support.

Request for public participation and input to the planning process was first announced on the Fayette County EMA Facebook page on August 27, 2019. The current plan was made available at the Carnegie Library in Washington Courthouse as well as on the Fayette County EMA web site. However, there was no participation by nor comments received from the public.

Throughout the plan development phase, stakeholders – businesses, industry, commercial ventures, private organizations, and the public – were invited to attend and participate in the Planning Team meetings. Locations, dates and times were made to the public and announcements were posted at meeting locations.

# II. Form the Planning Team

The Fayette County EMA Director invited those individuals that were on the planning team to reconvene the team from the previous planning process along with additional individuals or organizations. This list included representatives from agencies involved in hazard mitigation activities, agencies with the authority to regulate development, and offices responsible for enforcing local ordinances were important members of the planning team.

# **III. Identify Participating Agencies**

The following agencies and individuals participated in the development of this plan:

| Community   | Name            | Position / Title      | Agency / Organization             |
|-------------|-----------------|-----------------------|-----------------------------------|
| County Gov  | Dan Dean        | Commissioner          | Fayette Co Board of Commissioners |
| County Gov  | Jim Garland     | Commissioner          | Fayette Co Board of Commissioners |
| County Gov  | Tony Anderson   | Commissioner          | Fayette Co Board of Commissioners |
| County Gov  | Craig Breedlove |                       | Fayette Co Bldg Dept              |
| County Gov  | Jay Myers       |                       | Fayette Co Bldg Dept              |
| County Gov  | Jim Garland     |                       | Fayette Co                        |
| EMA-State   | Phillip Clayton | SW Supervisor         | Ohio EMA                          |
| EMA-County  | Thomas Breckel  | Director              | Clinton Co EMA                    |
| EMA-County  | Melissa Havens  | Director              | Fayette Co EMA                    |
| EMA-County  | David Bushelman | Director              | Highland Co EMA                   |
| EMA-County  | Deborah Sims    | Director              | Madison Co EMA                    |

# **IV. Hold Meetings**

# A. Kick-Off Meeting

The Planning Team conducted their Kick-Off meeting on October 9, 2018, at the Fayette County Center for Economic Development. The RDI Solutions consultant presented an overview of mitigation as well as requirements and expectations for a successful planning process and approved plan.

# **B. Planning Meeting for Hazards**

The Planning Team met on December 9, 2019 to identify and analyze hazards.

# C. Planning Meeting for Goals & Actions

The Planning Team met on February 19, 2020 to establish goals, review actions from the 2015 plan, develop new actions and prioritize these actions.

# D. Other Information Exchange

To maximize the effective use of time in meetings, drafted material was emailed to the Planning Team. Also, worksheets aimed at collecting information to be acted upon by the Planning Team were distributed ahead of the meetings. Information not available at meetings was gathered later and included in the planning process. Additionally, worksheets were sent to Planning Team members that could not attend as well as the various jurisdictions soliciting input on mitigation actions that would have application to them. Those returned were included in plan development. Phone calls were also used to clarify information gathered.

### V. Gather Information

The Planning Team invited each jurisdiction's governing body to its planning meetings to gather information unique to each jurisdiction. The team also contacted agencies that have a mitigation-related role. This included the Fayette County Health Department, Fayette County Soil & Water Conservation District, Fayette County Engineer's Office, Fayette County Auditor's Office, Fayette County Sheriff's Office and Fayette County EMA.

The Planning Team reviewed existing plans and reports including Fayette County's Emergency Operations Plan, Soil Report, plat maps, and Planning Commission regulations.

The Planning Team performed extensive research from online resources such as Federal Emergency Management Agency (FEMA), National Oceanic and Atmospheric Administration (NOAA), US and Ohio Departments of Transportation (USDOT/ODOT) and Ohio Department of Natural Resources (ODNR). The source is identified where this information is presented in this plan.

Due to the physical distancing requirements levied on public gatherings as a result of the COVID-19 pandemic, action prioritization was conducted by email, texting, and telephone calls. Participants are listed in <u>Section VIII – Supplemental Information</u>.

# VI. Draft the Updated Plan

# A. Update Community Profile and Assets

The Planning Team updated the community profile and its assets based on data collected and is presented in <u>Section III – Community Profile and Assets</u>.

# B. Perform Hazard Analysis, Formulate Goals and Mitigation Actions

### 1. Hazard Identification

The Planning Team identified the following hazards, in rank order, considered to be credible threats to Fayette County's community assets.

Severe Winter Storms

- Pandemic
- Severe Summer Storms
- Power Outage
- Tornadoes
- Hazardous Material Release
- Dam Failure
- Cyber Attack
- Droughts
- Flooding
- Earthquakes
- Land Subsidence

Refer to Section IV – Hazard Identification and Analysis and for details.

# 2. Hazard Profile, Vulnerability Assessment & Impacts

The Planning Team collected and reviewed hazard information, assessed the impacts and the community's vulnerabilities. Refer to <u>Section V – Hazard Profiles, Analyses</u> and Vulnerable Assets for details.

# 3. Goals & Mitigation Actions

The Planning Team reviewed the vulnerabilities of impacted assets and decided on the following mitigation goals in priority order based on impact resolution.

The Planning Team selected the following goals:

- Reduce or eliminate impact on public safety, lives and property
- Provide timely warning
- Create self sufficiency
- Plan for safe development
- Increase public awareness
- The Planning Team first reviewed the 139 actions from the 2015 plan and found several issues that needed to be resolved as follows before continuing:

| Issue  | Count | Resolution                 |
|--|-------|----------------------------|
| Normal maintenance item                      | 2     | Deleted                    |
| Not a mitigation action                      | 15    | Deleted                    |
| So close to another action as to be the same | 61    | Merged into another action |
| Local Emergency Planning Committee role      | 24    | Deleted                    |
| None (Restated as necessary)                 | 37    | Carried Forward            |

- Refer to <u>Section VII Supplemental Information</u> for a chart detailing these adjustments.
- The Planning Team then reviewed the adjusted current mitigation actions and added several new ones. Using Cost Benefit Review procedures, the planning team prioritized the actions. The following table depicts the mitigation actions developed and selected and the priority assigned. Note that priorities from the previous Plan were modified based on the results of this approach.

| Priority | Mitigation Action   |
|----------|---|
| 1        | Install back-up generators for shelters and critical facilities.      |
| 2        | Install/upgrade outdoor warning sirens.                               |
| 3        | Develop and implement an all-hazards public education program.        |
| 4        | Develop a warehousing system for storing essential disaster supplies. |

| Priority | Mitigation Action   |
|----------|---|
| 5        | Provide NOAA All-Hazards Warning Radios for all critical facilities.  |
| 6        | Establish a series of dry hydrants throughout the county.   |
| 7        | Identify/upgrade facilities to be shelters.   |
| 8        | Mitigate water and wastewater treatment facilities located in flood hazard areas.   |
| 9        | Upgrade water treatment plant carbon process and upgrade disposal.  |
| 10       | Increase the size of sewage lagoons to reduce probability of overflow.  |
| 11       | Develop and implement a volunteer management program.   |
| 12       | Provide designated locations/facilities to house displaced animals.   |
| 13       | Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.  |
| 14       | Review, revise and adopt policies/ordinances to improve stormwater management.  |
| 15       | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures.   |
| 16       | Identify alternate potable water sources and develop a distribution system.   |
| 17       | Mitigate structures at risk   |
| 18       | Promote the construction and use of safe rooms by requiring construction of safe rooms in new schools, daycares, and nursing homes. Encouraging the construction and use of safe rooms in homes and shelter areas of manufactured home parks, fairgrounds, shop |
| 19       | Update the County Land Use Document to place greater restrictions on what can be built within the floodplain and to suggest many suitable alternative locations for mobile homes.   |
| 20       | Rehabilitate dams known to be of high hazard potential.   |
| 21       | Request update of Digital Flood Insurance Rate Maps (DFIRMS).   |
| 22       | Partner with local environmental groups to make best use of areas prone to flooding that cannot be built upon.  |
| 23       | Construct community safe rooms.   |
| 24       | Develop and implement a tree trimming program to help prevent damage from falling limbs.  |
| 25       | Update dam Emergency Action Plans; update inundation data for dams without EAPs or no current inundation data   |
| 26       | Construct additional water storage facility for emergency crop management and fire suppression.   |
| 27       | Construct residential safe rooms.   |

Refer to <u>Section VI – Mitigation Goals and Actions</u> and <u>Section VII – Mitigation Action</u> <u>Identification & Analysis</u> for details.

### 4. Draft Plan

The RDI Solutions consultant drafted the plan, responded to comments, and made appropriate changes.

### VII. Submit Plan to Ohio EMA and FEMA

The plan in its final form was submitted to Ohio EMA in September 2020.

On *Month Date, 2020,* FEMA determined this plan meets its requirements.

# VIII. Adopt Plan

- On *Month Date*, 2020, the Fayette County Board of Commissioners adopted this plan.
- On *Month Date*, 2020, the City of Washington Courthouse adopted this plan.
- On *Month Date*, 2020, the Village of Bloomingburg adopted this plan.

- On *Month Date*, 2020, the Village of Jeffersonville adopted this plan.
- On Month Date, 2020, the Village of Milledgeville adopted this plan.
- On *Month Date, 2020*, the Village of New Holland adopted this plan.
- On *Month Date, 2020*, the Village of Octa adopted this plan.
- On Month Date, 2020, FEMA granted federal approval.

### IX. Present Plan to the Public

The plan was placed in the Carnegie Library in Washington Courthouse and on the Fayette County EMA's website and a public notice was placed on the Fayette County EMA web site as well as through a social media (Facebook) post inviting residents to review and comment on the plan.

Additionally, a copy of the updated plan was sent to the EMAs of adjacent counties.

# X. Monitor Plan Implementation

The Fayette County EMA Director monitors the implementation of this plan by periodic contact with lead agencies and presents status to the Planning Team and commissioners at each annual review.

The Fayette County EMA Director also provides a copy of this plan to all stakeholders and agencies with authorities related to mitigation actions and coordinates with them to assist in integrating mitigation goals and actions into their plans and actions.

# XI. Keep Plan Up to Date

The Fayette County EMA Director monitors the implementation of this plan by having lead agencies provide updates as the status of their mitigation actions change.

The Fayette County EMA Director convenes the Planning Team annually to review the progress of this plan and propose any needed updates. This meeting is publicly announced and is open to the public; notices are posted on the Fayette County EMA's web site and Facebook page as well as announced in the various newspapers serving Fayette County. At this meeting, the team:

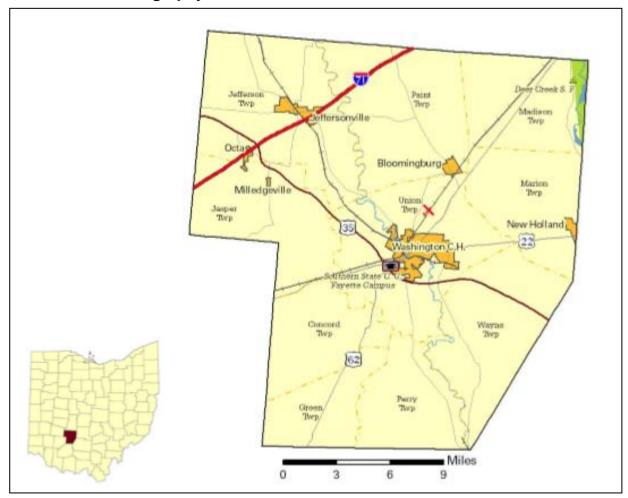

- Reviews the status of all mitigation actions.
- Assesses the progress toward achieving mitigation goals.
- Considers new related information as it becomes available. This includes recent hazard occurrences as well as changes in related planning documents. If this information would have an impact on goals or actions, the team proposes changes such as adding, changing or eliminating goals or mitigation actions.
- Presents proposed changes to the Board of County Commissioners and chief elected officials of affected jurisdictions for concurrence.
- Formally documents the proceedings, provides it to all stakeholders and makes it available with the current plan.

Once every five years, the Fayette County EMA initiates a formal plan update based on then current FEMA requirements and FEMA and Ohio EMA guidance.

The Fayette County EMA may process out-of-cycle updates by submitting changes to the Board of County Commissioners and the Ohio EMA.

# **Section III – Community Profile and Assets**

# I. Location and Geography

Fayette County is located in the south-central portion of the State of Ohio. It covers approximately 406.6 square miles. It is bounded by:

- Pickaway County to the east
- Ross County to the southeast
- Highland County to the southwest
- Clinton County to the south
- Greene County to the west
- Madison County to the north

### II. Land Use

### A. Land Use/Land Cover

The following chart depicts Fayette County's land use and cover<sup>1</sup>:

| Land Use/Land Cover         | Percentage |
|-----------------------------|------------|
| Developed, Higher Intensity | 5.34%      |
| Developed, Lower Intensity  | .82%       |

<sup>&</sup>lt;sup>1</sup> https://www.development.ohio.gov/files/research/C1025.pdf

| Land Use/Land Cover                     | Percentage |
|---|------------|
| Barren (strip mines, gravel pits, etc.) | .03%       |
| Forest                                  | 4.93%      |
| Shrub/Scrub and Grasslands              | .12%       |
| Pasture/Hay                             | 4.60%      |
| Cultivated Crops                        | 83.65%     |
| Wetlands                                | .25%       |
| Open Water                              | .27%       |

# **B.** Major Waterways

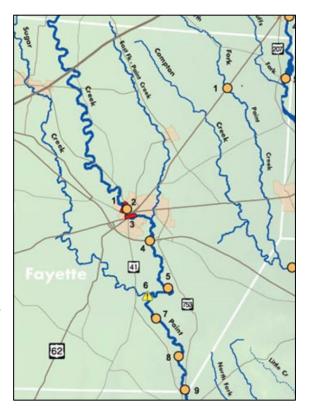

Paint Creek originates in Madison County and flows southerly into Fayette County, forming the boundary between Jefferson and Paint Townships, through Washington Courthouse, to the southeast corner of the county, forming the boundary between Perry and Wayne Townships and continuing between Highland and Ross Counties into the Paint Creek Lake.

Deer Creek originates in Madison County and flows southerly into Fayette County along its northeastern border into Deer Creek Lake – partially in Fayette and Pickaway Counties.

There are numerous tributaries – both continuous and intermittent – feeding into Deer or Paint Creeks, either in or out of the county.

### C. State Lands<sup>2</sup>

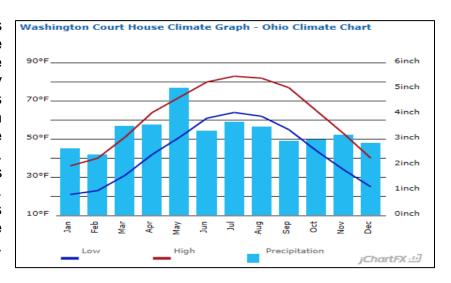

Deer Creek State Park is partially located in northeast Fayette County and in Pickaway County. Most amenities are located in Pickaway County.

<sup>&</sup>lt;sup>2</sup> http://ohiodnr.gov/

### III. Climate

The following chart depicts climate information for Fayette County<sup>3</sup>. The average temperature in Fayette County is 52 degrees. The county has temperature extremes from sub-zero in the winter to the mid-90s in the summer. Average wind is 7-12 miles per hour from the southwest. The average annual rainfall is 40 inches. Of this, the average snowfall is 21 inches.

# IV. Jurisdictions and Populations

Fayette County is subdivided into ten townships, one city and five incorporated villages. Populations are 2018 estimates calculated by the Ohio Department of Development<sup>4</sup>

| Jurisdiction       | 2018 Est | 2010 Delta |
|--------------------|----------|------------|
| Townships:         |          |            |
| Concord Township   | 883      | -2.00%     |
| Green Township     | 524      | -1.50%     |
| Jasper Township    | 577      | -2.04%     |
| Jefferson Township | 1,390    | -2.04%     |
| Madison Township   | 1,099    | -2.05%     |
| Marion Township    | 646      | -1.67%     |
| Paint Township     | 1,021    | -1.54%     |

<sup>3</sup> https://www.usclimatedata.com/climate/washington-court-house/ohio/united-states/usoh1002

<sup>&</sup>lt;sup>4</sup> https://www.development.ohio.gov/files/research/P5027.pdf

| Jurisdiction           | 2018 Est | 2010 Delta |
|------------------------|----------|------------|
| Perry Township         | 1,029    | -2.00%     |
| Wayne Township         | 1,354    | -2.24%     |
| Union Township         | 3,616    | -1.87%     |
| Townships Total        | 12139    | -1.92%     |
| Cities:                |          |            |
| Washington Court House | 14,159   | -0.56%     |
| Cities Total           | 14,159   | -0.56%     |
| Villages:              |          |            |
| Bloomingburg           | 919      | -2.03%     |
| Jeffersonville         | 1,176    | -2.24%     |
| Milledgeville          | 110      | -1.79%     |
| New Holland            | 105      | -1.87%     |
| Octa                   | 58       | -1.69%     |
| Villages Total         | 2368     | -2.11%     |
| County Total           | 28,666   | -1.27%     |

# V. Demographics

The following information is a summary of information from the US Census Bureau<sup>5</sup>:

Population Trend. While the nation is growing at a 6% rate and Ohio at a 1.3% rate, Fayette County is losing population at a 1.5% rate (note the slight discrepancy between state and federal figures).

*Diversity.* With the exception of ethnicity and primary language (Fayette County is approximately 9% more European American, 7% less African American and 3% less Hispanic), Fayette County's diversity closely matches that of Ohio and the United States. This includes gender, age and family size.

Home Ownership. Fayette County's home ownership rate is 4% higher than the state and 6% higher than national averages.

Home Values. The average home value in Fayette County is \$120,900, 14% less than the state average and 41% less than the national average.

Education. Fayette County students graduate high school close to the national average. The number of residents with post-high school degrees is a little less than one half of the state and national averages.

*Unemployment.* Fayette County's unemployment rate is approximately 4%, similar to Ohio as a whole but about 1% above the national average.

*Income.* The per capita income is \$23,756, 22% lower than the state average and 27% lower than the national average. Eighteen percent of Fayette County's population live below the poverty line, 32% higher than the state and 54% higher than national levels.

For a comprehensive analysis of Fayette County's demographics, refer to the City-Data.com web site<sup>6</sup>.

<sup>&</sup>lt;sup>5</sup> https://www.census.gov/quickfacts/fact/table/Fayettecountyohio,oh,US/PST045218

<sup>&</sup>lt;sup>6</sup> http://www.city-data.com/county/Fayette\_County-OH.html

# VI. Congregate Care Populations<sup>7</sup>

Congregate Care facilities house people that typically require some form of assistance for daily activities. Challenges for emergency responders include assisting with evacuation and sheltering those in these facilities. The following list reflects population in the major congregate facilities:

| Facility Name                          | Location               |               |
|--|------------------------|---------------|
| Signature HealthCARE of Fayette County | 375 Glenn Ave          | Washington CH |
| St. Catherine's Manor                  | 250 Glenn Ave          | Washington CH |
| Court House Manor                      | 555 N. Glenn Ave       | Washington CH |
| Four Season's                          | 201 Courthouse Parkway | Washington CH |
| Carriage Court Assisted Living         | 500 N Glenn Ave        | Washington CH |

### **VII. Major Community Events**

The *Fayette County Fair* is held usually 3<sup>rd</sup> week in July at the Fayette County Fairgrounds. The fairgrounds are located east of Washington Court House between US 35, US 22, US 62 and Fairview Ave.

The *Scarecrow Festival* is held the 3<sup>rd</sup> weekend in September in downtown Washington Court House.

The Toast to Summer is held the last Saturday in June at the Fayette County Airport.

### VIII. Structures Types and Values

For the purposes of mitigation planning, structures are classified as follows:

- Residential. These include single and multi-family dwellings, apartments, condominiums and the like. Congregate care facilities, such as nursing homes, are not included here.
- Nonresidential. Any structure not classified as Residential or Critical.
- *Critical.* These include hospitals, medical clinics, schools, fire stations, police stations and emergency operations facilities and are not included in the above counts.

For the purposes of this plan, structure values are stated related to the replacement value, not the appraised or market value.

The following summaries the structure counts and values used in this plan8:

| Structure Type | Inventory | Average Value |
|----------------|-----------|---------------|
| Residential    | 11,199    | \$204,704     |
| Nonresidential | 1,075     | \$787,403     |
| Critical       | 25        | \$450,000     |

# IX. Major Transportation Routes

# A. Highways

The major highways in Fayette County are:

I 71 traverses the county north-south from Pickaway County (Circleville) through Chillicothe to Pike County (Waverly).

*US 35* traverses the county northwest to southeast from Fayette County (Washington Courthouse) through Chillicothe and Richmond Dale to Jackson County (Jackson).

\_

<sup>&</sup>lt;sup>7</sup> Fayette County EMA

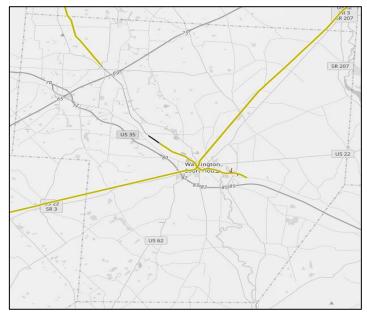

<sup>&</sup>lt;sup>8</sup> HAZUS Simulations discussed under Hazard Identification and Analysis

### **B.** Airways

The Fayette County Airport is located northeast of Washington Courthouse off Old State Route 38 NE on Airport Rd NE.

# C. Railways

Indiana & Ohio Railway Company (IORY) operates a railway that connects Washington Courthouse to Columbus, Springfield and Cincinnati. There are terminals near Washington Courthouse and Jeffersonville.<sup>9</sup>

# X. Development Trends

# A. Land Usage

Land usage hasn't changed significantly in recent years.

### **B.** Economic Conditions

Fayette County is enjoying a steady decrease in unemployment – 15% in 2010 to currently 4.1%.

# XI. Public Warning and Notifications Systems

### A. NOAA Weather Radio All Hazards<sup>10</sup>

All county government facilities, local schools, hospitals and nursing homes are encouraged to have weather/all hazard alert radios.

### **B. Outdoor Warning Sirens**

There are 17 outdoor warning sirens located in population centers around the county.

# C. Public Safety Notification System

Fayette County employs Nixle, a notification system providing the capability to make emergency notifications to county residents via phone; cell phone users must register – approximately 20% of residents have registered.

# XII. Authorities Affecting Mitigation Activities

### A. Zoning and Building Regulations

Fayette County has a Planning Commission and countywide Comprehensive Plan which is and includes all townships and jurisdictions. Fayette County (covering unincorporated

<sup>&</sup>lt;sup>9</sup> https://www.openrailwaymap.org/

<sup>10</sup> http://www.nws.noaa.gov/nwr/

areas) as well as all cities and villages have floodplain regulations formally adopted by resolution or ordinance. As of the Spring of 2005, all entities in Ohio now follow the State Building Code. There are no zoning ordinances in Fayette County. All health and safety regulations follow State of Ohio laws. Below is a summary of their capabilities:

| Jurisdiction  | Planning<br>Commission | Comprehensive<br>Plans | Floodplain<br>Regulations | Building Codes   | Zoning<br>Ordinances | Capital Budget<br>for Mitigation | Public Works<br>Budget for<br>Mitigation |
|---|------------------------|------------------------|---------------------------|------------------|----------------------|----------------------------------|--|
| Fayette County<br>(Covers<br>Unincorporated<br>Areas) | Yes                    | Yes                    | Yes                       |                  | No                   | No                               | Operating Funds<br>In-Kind Wages         |
| Washington<br>Court House                             | Yes                    | No                     | Yes                       | Ohio<br>Building | Yes                  | No                               | Operating Funds<br>In-Kind Wages         |
| Bloomingburg  | No                     | No                     | Yes                       | Codes            | No                   | No                               | In-Kind Wages                            |
| Jeffersonville  | No                     | No                     | Yes                       |                  | No                   | No                               | In-Kind Wages                            |
| Milledgeville   | No                     | No                     | No                        |                  | No                   | No                               | In-Kind Wages                            |
| New Holland   | No                     | No                     | Yes                       |                  | No                   | No                               | In-Kind Wages                            |
| Octa  | No                     | No                     | Yes                       |                  | No                   | No                               | In-Kind Wages                            |

## B. Floodplain Management

Fayette County floodplain regulations are maintained by the county commissioners and mayors of those cities and villages with such regulations. These regulations are the Special Purpose Flood Damage Reduction Regulations. Section 3.1 designates the position of Floodplain Administrator. Section 3.2 outlines the duties and responsibilities of this position. Duties include, but are not limited to enforcement of the regulations, routine monitoring of the flood zones and providing community assistance such as encouragement of owners to maintain flood insurance.

# C. National Flood Insurance Program (NFIP)

The following table reflects participation in and compliance with the NFIP<sup>11</sup>.

| CID    | Jurisdiction              | Initial<br>FHBM<br>Identified | Initial<br>FIRM<br>Identified | Current Effective<br>Map Date | Reg-<br>Emer<br>Date | Sanction<br>Date |
|--------|---------------------------|-------------------------------|-------------------------------|-------------------------------|----------------------|------------------|
| 390164 | Fayette County            | 12/9/1977                     | 6/1/1995                      | 3/2/2004                      | 6/1/1995             | N/A              |

-

<sup>11</sup> https://www.fema.gov/cis/OH.html

# **D. Fayette County Health Department**

The Health Department monitors and enforces regulations for septic systems and potable wells as well as deals with public health issues.

# XIII. Mitigation Funding Sources

# A. Operating Budgets

Funding for routine maintenance and improvements come from normal operating budgets. Mitigation Actions are considered when performing routine maintenance and improvements.

### B. Grants

# 1. Community Development Block Grant Program<sup>12</sup>

The US Department of Housing and Urban Development's (HUD) Community Development Block Grant (CDBG) program is a flexible program that provides communities with resources to address a wide range of unique community development needs.

# 2. Hazard Mitigation Grant Program

The Hazard Mitigation Grant Program (HMGP) is authorized by Section 404 of the Robert T. Stafford Disaster Relief and Emergency Act, as amended. The key purpose of HMGP is to ensure that the opportunity to take critical mitigation measures to reduce the risk of loss of life and property from future disasters is not lost during the reconstruction process following a disaster. HMGP is available, when authorized under the Presidential major disaster declaration, in areas of the State requested by the Governor.

# 3. Pre-Disaster Mitigation Program

The Pre-Disaster Mitigation (PDM) program is authorized by Section 203 of the Stafford Act, 42 USC 5133. The PDM program is designed to assist States and local communities to implement a sustained pre-disaster natural hazard mitigation program to reduce overall risk to the population and structures from future hazard events, while also reducing reliance on Federal funding from future major disaster declarations.

# 4. Flood Mitigation Assistance Program

The Flood Mitigation Assistance (FMA) program is authorized by Section 1366 of the National Flood Insurance Act (NFIA) of 1968, as amended with the goal of reducing or eliminating claims under the National Flood Insurance Program (NFIP).

### 5. Other Mitigation Grants

Information on other grant programs is available on the Ohio EMA's State Hazard Analysis Resource and Planning Portal (SHARPP)<sup>13</sup>.

\_

<sup>12</sup> http://portal.hud.gov/hudportal/HUD?src=/program offices/comm planning/communitydevelopment/programs

<sup>&</sup>lt;sup>13</sup> http://ohiosharpp.ema.state.oh.us/OhioSHARPP/Grants.aspx#otherMitigationGrants

# Section IV - Hazard Identification and Analysis

### I. Overview

The Fayette County Mitigation Planning Team identified hazards of credible threat and analyzed their impact using qualitative and quantitative methods. The team used the *FEMA Local Mitigation Planning Handbook, March 2013*<sup>14</sup>, as a guide for conducting analysis.

### II. Hazard Identification

The Planning Team chose the natural hazards the Ohio EMA identified as those likely to impact the state of Ohio (as documented in the *2019 State of Ohio Hazard Mitigation Plan (SOHMP)*<sup>15</sup>, page 2-3) as the starting point for hazard identification. It then, based on a review of the community profile and historical records of hazards affecting south central Ohio, selected the natural hazards it considered to be credible threats to Fayette County's assets. Eight of these hazards were identified for Hazard and Vulnerability Analysis.

| Hazard from SOHMP           | Significant Impact on Assets                |
|-----------------------------|---|
| Flooding                    | Yes   |
| Winter Storms               | Yes   |
| <b>Severe Summer Storms</b> | Yes   |
| Tornadoes                   | Yes   |
| Drought                     | Yes   |
| Earthquake                  | Yes   |
| Dam/Levee Failure           | Yes   |
| Invasive Species            | No – Day-to-day operations deals with these |
| Landslide                   | No – Not an issue                           |
| Land subsidence             | Yes   |
| Wildfire                    | No – No past impacts on assets              |
| Coastal Erosion             | No – No coastline                           |

The Planning Team identified the following additional hazards that have had or would have significant impact on Fayette County:

- Hazardous Materials Release. This technological hazard has had impact on Fayette County in past with the potential to have major impact. This hazard was included in the ranking of hazards, hazard analysis, hazard profile and action development.
- Pandemic. The biological hazard would potentially have immeasurable impact.
   Illness and even deaths would cause a ripple affect all aspects of personal lives –
   physical, social, economic as well as the community as a whole medical assets,
   economic, policies and procedures, security to name a few. This hazard was included
   in the ranking of hazards, hazard analysis, hazard profile and action development.
- Cyber Attack. This man-made hazard has recently been experienced by the Fayette
  County government information systems with significant impact on operations relying
  on these systems as well as loss of productivity to restore the systems and to recreate
  lost information. As it is worth noting for others who may use the information in this
  plan for other purposes, this hazard was included in the ranking of hazards but not
  hazard analysis, hazard profile or action development.

<sup>&</sup>lt;sup>14</sup> https://www.fema.gov/media-library/assets/documents/31598

<sup>15</sup> https://sharpp.dps.ohio.gov/OhioSHARPP/Planning.aspx#SOHMP

 Power Outage. This technological hazard has had significant impact on Fayette County in past. Although the primary contributing hazards – most notably Severe Winter Storms, Severe Summer Storms, and Tornadoes – are already addressed, this hazard was included in the ranking of hazards but not hazard analysis, hazard profile or action development.

# III. Hazard and Vulnerability Analysis Methodology

The Planning Team profiled each of the eight natural hazards identified. It collected and reviewed hazard information, assessed the impacts and the vulnerabilities of the community's assets. Events recorded in National Centers for Environmental Information (NCEI)<sup>16</sup> data base as well as locally added events were considered occurrences. Criteria for NCEI event inclusion and categorization are contained in the *National Weather Service Instruction 10-1605*<sup>17</sup>

The team assigned risk factor values based on the criteria and adjusting factors established by the Ohio EMA.

| Risk<br>Factor | <b>Criteria</b>   | Adjusting<br>Factor |
|----------------|---|---------------------|
| Frequency      | If a hazard/event does not apply it is given a value of NA. If a hazard/event resulted in no local disaster declarations, it scored a one. If the hazard/event resulted in one — two local disaster declarations, it has a Low Probability of occurrence and scored a two. If it resulted in three — five declarations, it has a Medium Probability and numerical score of three. If the hazard/event resulted in six — eight local disaster declarations, it has a High Probability and scored a four. If the hazard/event resulted in nine or more declarations, it should receive an Excessive Probability rating and a score of five. It is important to note that frequency was considered a key factor in determining the hazard profile. To that end, an Adjusted Frequency score was added for this factor and multiplied by 1.5 to weight the score more importantly than other factors. | 1.5                 |
| Response       | Average Response Duration may be defined as "time on the ground" or the time-<br>period of response to a hazard, or event. Transportation accidents may last a few<br>hours whereas a tire fire may last a week or a flood several weeks. Duration,<br>therefore, may not always be indicative of the degree of damage but it remains an<br>important planning factor.  | 1                   |
| Onset          | Average Speed of Onset may affect all other factors due to lack of warning or time to prepare for impact. The lead-time required protecting lives and property varies greatly with each event. For instance, a winter storm may develop so slowly that there is time to alert crews and emplace plows, but flash floods can occur with no warning.  | 1                   |
| Magnitude      | Average Magnitude is the geographic dispersion of the hazard. For instance, how much of your community would be impacted by a flood or hazardous material incident? Similar to the Frequency, this factor is deemed more important and therefore received a weighted value of 1.25 above the raw score. The score is based on the percent of land area impacted by an event.  | 1.25                |

<sup>&</sup>lt;sup>16</sup> http://www.NCEI.noaa.gov/stormevents/

<sup>17</sup> https://www.ncdc.noaa.gov/stormevents/pd01016005curr.pdf

| Risk<br>Factor | Criteria  | Adjusting<br>Factor |
|----------------|---|---------------------|
| Business       | The Impact on Business refers to enduring economic impact of the hazard on the community by an event. A score of one compares to a shutdown of critical facilities for less than 24 hours. Two equals a complete shutdown of critical facilities for one week. A score of three means a complete shutdown of critical facilities for at least two weeks. A score of four equals a complete shutdown of critical facilities for 30 days or more. This factor was developed and in keeping with the hazard analysis in the Ohio Standard Mitigation Plan developed by the Ohio EMA Mitigation Branch. | 1                   |
| Human          | This factor relates to the number of lives potentially lost to a particular hazard agent. This factor can vary between jurisdictions based on economic, geographic, and demographics of the particular populations. Therefore, some generalization need be inflected on this factor. This factor was developed and in keeping with the hazard analysis in the Ohio Standard Mitigation Plan developed by the Ohio EMA Mitigation Branch.  | 1                   |
| Property       | This factor relates to the amount of property potentially lost to a particular hazard agent. This factor can vary between jurisdictions based on economics, geographic amount owned, and demographics of the particular populations. Therefore, some generalization need be inflected on this factor. This factor was developed and in keeping with the hazard analysis in the Ohio Standard Mitigation Plan developed by the Ohio EMA Mitigation Branch.   | 1                   |

The team then estimated countywide structures at risk and associated damages for typical events using the following formula:

| Structure<br>Type | Inventory | Average<br>Value |      |       | Percent<br>Damaged |      | Percent<br>Damages | Total<br>Damages |
|-------------------|-----------|------------------|------|-------|--------------------|------|--------------------|------------------|
| Residential       | 38,473    | \$76,246         | 0.5% | 192.4 | 10.0%              | 19.2 | 10.0%              | \$146,392        |
| Nonresidential    | 4,920     | \$114,407        | 1.0% | 49.4  | 10.0%              | 4.9  | 10.0%              | \$56,059         |
| Critical          | 19        | \$250,000        | 0.0% | 0.0   | 0.0%               | 0.0  | 10.0%              | \$0              |

The team estimated the percent of total or actual numbers of structures at risk, the percent of these or actual number of damaged in a typical event and the percent of structure or actual structural damage. Knowing the inventory and average value, total damages incurred for a typical event were then calculated. If numeric estimates were available, they were used in lieu of estimating by percentage.

# IV. Hazard and Vulnerability Analysis Results

The following summarizes the analysis results. Details are contained in Section V – Hazard Profiles, Analyses and Vulnerable Assets.

# A. Hazard Analysis

The following table consolidates and ranks the analysis of each hazard:

| Hazard                     | Frequency | Response | Onset | Magnitude | Business<br>Impact | Human<br>Impact | Property<br>Impact | Adjusted<br>Total |
|----------------------------|-----------|----------|-------|-----------|--------------------|-----------------|--------------------|-------------------|
| Severe Winter Storms       | 4.5       | 2        | 3     | 5         | 0                  | 1               | 1                  | 16.5              |
| Pandemic                   | 1.5       | 5        | 1     | 0         | 4                  | 4               | 0                  | 15.5              |
| Severe Summer Storms       | 4.5       | 2        | 2     | 3.75      | 0                  | 0               | 1                  | 13.25             |
| Power Outage *             | 3         | 2        | 1     | 3.75      | 1                  | 2               | 0                  | 12.75             |
| Tornadoes                  | 3         | 1        | 3     | 1.25      | 0                  | 2               | 2                  | 12.25             |
| Hazardous Material Release | 3         | 2        | 4     | 0         | 0                  | 2               | 0                  | 11                |
| Dam Failure                | 1.5       | 2        | 3     | 1.25      | 1                  | 1               | 1                  | 10.75             |
| Cyber Attack *             | 1.5       | 3        | 4     | 0         | 0                  | 0               | 0                  | 8.5               |
| Droughts                   | 1.5       | 3        | 1     | 2.5       | 0                  | 0               | 0                  | 8                 |
| Flooding                   | 3         | 1        | 2     | 1.25      | 0                  | 0               | 0                  | 7.25              |
| Earthquakes                | 0         | 1        | 1     | 1.25      | 1                  | 1               | 1                  | 6.25              |
| Land Subsidence            | 1.5       | 1        | 1     | 1.25      | 0                  | 0               | 0                  | 4.75              |

<sup>\*</sup> These hazards were included in the ranking of hazards but not hazard analysis, hazard profile or action development.

# **B. Vulnerability Analysis**

The following table consolidates the property impact analysis of each vulnerability:

| The fellenning table ee    | Structures at Risk |      |        |       | Damage in Millions of Dollars |         |       |         |
|----------------------------|--------------------|------|--------|-------|-------------------------------|---------|-------|---------|
|                            | Residen-           |      | Cri-   |       |                               |         |       |         |

# Section V - Hazard Profiles, Analyses and Vulnerable Assets

### I. Severe Winter Storms

# A. Description

A winter storm is an event in which the main types of precipitation are snow, sleet or freezing rain. Winter Storm hazards include wind chill, ice storms, heavy snow, and blizzard conditions.

Most deaths from winter storms are not directly related to the storm itself.

- People die in traffic accidents on icy roads.
- People die of heart attacks while shoveling snow.
- People die of hypothermia from prolonged exposure to cold.

Everyone is potentially at-risk during winter storms. The actual threat to you depends on your specific situation. Recent observations show that:

Of injuries related to ice and snow:

- About 70% occur in automobiles.
- About 25% are people caught out in the storm.
- Majority are males over 40 years old.

Of injuries related to exposure to cold:

- 50% are people over 60 years old.
- Over 75% are males.
- About 20% occur in the home.

Three basic ingredients are necessary to make a winter storm:

- Cold air. Below freezing temperatures in the clouds and near the ground are necessary to make snow and/or ice.
- Lift. Something to raise the moist air to form the clouds and cause precipitation. An example of lift is warm air colliding with cold air and being forced to rise over the cold dome. The boundary between the warm and cold air masses is called a front. Another example of lift is air flowing up a mountainside.
- Moisture. To form clouds and precipitation. Air blowing across a body of water, such as a large lake or the ocean, is an excellent source of moisture.

The severity may be measured in inches of snow or ice, but it's more the combination of freezing precipitation with the ambient and precipitation conditions just before the storm as well as the duration of freezing temperatures with temperatures hovering around freezing being an enhancer to the severity.

Wet Snow and Freezing Rain can weigh down power lines, tree limbs and roofs of structures. Wet snow compacts and can be difficult to dispose of.

Ice results for rain freezing or snow compacting. In addition to the effects of wet snow and freezing rain, ice can build up over time. As the temperature drops, it becomes harder and difficult to remove with snowplows; heavy equipment is usually needed. As the temperature rises above freezing, ice left on gravel roads, as are most township roads, will melt and seep into the roadbed causing the "bottom to drop out."

Dry Snow is usually not a significant problem as it can be plowed away.

There may also be flooding if the snow/ice accumulation is significant and the temperatures warm quickly.

Severe winter storms are those winter storms that have a significant impact. Source: NOAA<sup>18</sup>.

### B. Extent of Hazard

The severity of winter storms is measured in terms of snowfall, wind and temperature. Generally, a severe winter storm adds at least 6 new inches of snow, has winds of 40 mph or greater, causes ice accumulation of  $\frac{1}{2}$  inch or more or has a wind chill factor or less than 0 degrees.

Significant events as recorded by NCEI and local sources are considered occurrences.

### C. Historical Occurrence

The following major occurrences (injuries, deaths, total damage \$5,000 or greater) were recorded by the National Centers for Environmental Information (NCEI)<sup>19</sup> and local records. Available narratives of major events follow the table.

| Event           | Date       | Injuries | Deaths | Property Damage<br>x \$1000 | Crop Damage<br>x \$1000 |
|-----------------|------------|----------|--------|-----------------------------|-------------------------|
| Winter Storm    | 1/6/1996   |          |        | 500                         |                         |
| Cold/Wind Chill | 2/1/1996   |          |        | 20                          |                         |
| Winter Storm    | 12/22/2004 |          |        | 96                          |                         |

|              | Years | Events | Average Injuries | Average Deaths | Average<br>Property Damage<br>x \$1000 | Average<br>Crop Damage<br>x \$1000 | Annual<br>Probability | Mean Time<br>Between<br>Occurrences<br>(Months) |
|--------------|-------|--------|------------------|----------------|--|------------------------------------|-----------------------|---|
| All Events   | 24    | 92     | 0.0              | 0.0            | 7                                      | 0                                  | 383%                  | 3   |
| Major Events | 24    | 3      | 0.0              | 0.0            | 206                                    | 0                                  | 13%                   | 96  |

### Cold/Wind Chill - 1/2/1996

Arctic high pressure brought the coldest air of the season to the Ohio Valley. Cincinnati broke its record low on the 4th with a temperature of 11 below zero. Cincinnati also experienced its record low maximum temperatures of 7 and 6 degrees on the 3rd and 4th respectively. The extreme cold was entrenched for 5 days, freezing and bursting numerous water pipes. There were at least 2 house fires indirectly related to the cold weather, as space heaters, which were thawing frozen water lines, caught on fire. On

<sup>18</sup> http://www.nssl.noaa.gov/education/svrwx101/winter/

<sup>19</sup> http://www.NCEI.noaa.gov/stormevents/

the 5th, six thousand customers were without power near Portsmouth as over usage caused outages. AAA motor club had an extremely high number of calls during this cold wave when cars would not start.

### Winter Storm - 6/1/1996

The Blizzard of '96 developed near the Gulf Coast and moved up the East Coast. This massive system produced the greatest total and 24-hour snowfall at Greater Cincinnati\Northern Kentucky airport. This one storm brought 14.3 inches of snowfall to the airport which normally receives 23 inches for an entire season. The heaviest snow fell near the Ohio river in the extreme south. The worst blizzard conditions occurred over West Central areas as dry and powdery snow was blown around by high winds causing whiteouts. Some areas had more than 30 continuous hours of snowfall, and many people in Southern Ohio felt this was the worst winter storm since the Blizzard of '78. In Fayette county, the airport reported a wind gust to 56 mph during the height of the storm. By the end of the storm many homes and businesses had their roof collapse or partially collapse from the weight of the new snow, and snow from a storm earlier in the week. By late in the day on the 7th arctic air was pouring into the region. A 47-year-old man died of exposure under an overpass in Miami county. A 76-year-old man died of exposure on his front porch in Montgomery county.

### Winter Storm - 12/22/2004

A surface and upper level low pressure center tracked northeast across the Ohio Valley on Wednesday, December 22nd and exited the region on the 23rd. A swath of heavy snow cut through southeast Indiana and into the Miami Valley of Ohio. 24-hour storm totals in this narrow band exceeded 2 feet in Preble and Darke counties. Snowfall totals of 20 inches or more were found along a line generally running from Eaton to Greenville, Pigua, Sidney, and Bellefontaine. Along and west of the I-71 corridor between Cincinnati and Columbus...over 8 inches of snow fell. East of this line, warm air infiltrated the lower layers of the atmosphere and brought periods of freezing rain and sleet during the evening and overnight hours. A guarter inch or more of ice occurred along a line from Batavia to Hillsboro, to Circleville and Newark. Several communities in south central and central Ohio were crippled by power outages. Up to 236,000 electric customers were without power for several hours, some lasting up to a week before it was restored. At one point in time, 90% of Highland county was without power, and parts of Adams county were without water for a week. The Ohio Insurance Agency estimated the damage to all of Ohio from this storm to be on the order of 85 million dollars, including over 25 million dollars in property damage.

### • Frost/Freeze - 6/4/2007

Unseasonably warm temperatures for an extended period of time in March allowed much of the Ohio Valley to begin its agricultural growing season early. In early April, a cold snap with low temperatures dropping into the low 20s threatened agricultural interests across the region. The full effect of these weather extremes is still yet to be known and will not be known until the fall harvest can be compared with yields from previous years. The initial estimate of 16.74 million in crop damage was split evenly between 31 Ohio counties.

# D. Probability of Future Occurrences

With 92 occurrences in the past 24 years, the probability of such an occurrence in a given year is 383% or an average of one every 3 months.

With 3 major occurrences (injuries, deaths, total damage \$5,000 or greater) in the past 24 years, the probability of such an occurrence in a given year is 13% or an average of one every 96 months.

### **E.** Affected Locations

Severe winter storms affect the entire county.

# F. Analysis

| Factor    | Ranking                  |
|-----------|--------------------------|
| Frequency | Medium: 3-5 Declarations |
| Response  | < 1 Day                  |
| Onset     | 6-12 Hours               |
| Magnitude | > 50% Land Area          |
| Business  | No Impact                |
| Human     | Minor Injuries           |
| Property  | < 10% Damaged            |

# **G. Vulnerable Community Assets**

| Asset          | Impact   |
|----------------|--|
| People         | The primary impact on people would be isolation and not being able to travel at least on primary routes for about 12 hours after the storm subsided. Power outages would also be widespread.         |
| Economy        | Loss of power affect businesses both in loss of sales and refrigeration.  Late season freezing and heavy snow may adversely affect crops.  |
| Infrastructure | Electricity is likely to be out for a period of time. As this time increases, other utilities dependent on power will also likely fail.  |
| Structures     | Older structures and those with flat roofs would be most at risk by the weight of snow and ice on their roofs. The NWS's estimate of \$206,000 in damages per major event was used in this analysis. |

| Structure      | Inven- | Average   | At Risk |        | Dam | aged   | Damages |           |  |
|----------------|--------|-----------|---------|--------|-----|--------|---------|-----------|--|
| Type           | tory   | Value     | %       | Number | %   | Number | %       | Total     |  |
| Residential    | 11,199 | \$204,704 | 2.5     | 280    | 5.5 | 15     | 5       | \$157,608 |  |
| Nonresidential | 1,075  | \$787,403 | 2.5     | 27     | 5.5 | 1      | 5       | \$52,903  |  |
| Critical       | 26     | \$450,000 | 0       | 0      | 5   | 0      | 0       | \$0       |  |

#### II. Pandemic

## A. Description

Disease outbreaks are usually caused by an infection, transmitted through person-toperson contact, animal-to-person contact, or from the environment or other media. Occasionally the cause of an outbreak is unknown, even after thorough investigation.

A number of environmental factors influence the spread of communicable diseases that are prone to cause epidemics. The most important of these are:

- water supply
- · sanitation facilities
- food
- climate

A lack of safe water, inadequate excreta disposal facilities, poor hygiene, poor living conditions and unsafe food can all cause diarrheal diseases. These diseases are a major cause of suffering and death in an emergency situation.

Climate can affect disease transmission in a variety of ways. The distribution and population size of disease vectors can be heavily affected by local climate. Flooding after heavy rains can result in sewage overflow and widespread water contamination. In addition, there is some evidence to suggest that pathogens can be spread from one region to another along air streams or by wind.

Occasionally, an outbreak is seen in a population for which the cause is unclear. Such an outbreak may be due to a new or modified pathogen, a natural toxin, or it may be due to an initially undetected release of a chemical agent or over-exposure to ionizing radiation.

Source: World Health Organization<sup>20</sup>

For transmission to occur, there must be a source (typically an infected person), susceptible person and a mode of transmission. Typical modes of transmission are:

- Contact moves germs by touching germs present on surfaces and then carry the germs on their hands and spread to a susceptible person when proper hand hygiene is not performed before touching the susceptible person.
- Sprays and splashes occur when an infected person coughs or sneezes, creating droplets which carry germs short distances (within approximately 6 feet). These germs can land on a susceptible person's eyes, nose, or mouth and can cause infection. Close range inhalation occurs when a droplet containing germs is small enough to breathe in but not durable over distance.
- Inhalation occurs when germs are aerosolized in tiny particles that survive on air currents over great distances and time and reach a susceptible person. Airborne transmission can occur when infected patients cough, talk, or sneeze germs into the air.
- Sharps injuries can lead to infections when bloodborne pathogens enter a person through a skin puncture by a used needle or sharp instrument.

<sup>21</sup> https://www.cdc.gov/infectioncontrol/spread/index.html

A pandemic is a disease outbreak that spreads across countries or continents. The most common and anticipated is an influenza pandemic. This is a global outbreak of a new influenza A virus that is very different from current and recently circulating human seasonal influenza A viruses. Influenza A viruses are constantly changing, making it possible on very rare occasions for non-human influenza viruses to change in such a way that they can infect people easily and spread efficiently from person to person.

#### **B.** Extent of Hazard

A major pandemic is measured by a count of occurrences that result in emergency or disaster declaration.

#### C. Historical Occurrences

**1918-1920 – Spanish Flu.** The 1918 Influenza (Spanish Flu) pandemic which lasted globally for two years. There are wildly conflicting estimates about how many people caught the flu and how many people died from it. The lack of records from the time (either due to wartime censorship or shortages) makes it hard to tell. The smallest estimate is that 17 million people died. The highest estimate is that 100 million people died, or 5% of the global population. The flu pandemic is believed to have infected 500 million people, or over a quarter of the world.

**1949-1952 - Polio.** Over 6,000 people die from polio in the United States, out of a reported 100,000 cases. This, followed by the development of the polio vaccine, prompts one of the first major drives to inoculate children in the U.S.

**1957 – Asian Flu.** The "Asian Flu," H2N2, comes to the united states from China. It originates from a mutant flu strain carried by ducks. It arrives in the U.S. in June. This influenza pandemic kills 116,000 people in the United States.

**1968 – Hong Kong Flu.** The "Hong Kong Flu" is the third of the three influenza pandemics of the 1900s. This flu had a much lower mortality rate than the other two, but still resulted in 33,000 deaths in the U.S.

**1981-2007 – HIV/AIDS.** Human immunodeficiency viruses (HIV) and the symptomatic Acquired Immunodeficiency Syndrome (AIDS) spreads across the country, especially infecting high rates of homosexual people, lower income people, and drug addicts. Treatment for the disease receives little funding and attention due to the groups it affects. The FDA approves new tests that can quickly detect HIV, and new treatments. In 2007, Timothy Ray Brown becomes the first man cured of HIV. By this time, at least 600,000 people have died of HIV/AIDS in the U.S. alone.

**2009 – Swine Flu.** In April, H1N1, also known as Swine Flu, broke out and quickly spread to more than 150 countries. The CDC reported that between April and October 22 million Americans had contracted the virus, 98,000 required hospitalization, and about 3,900 people died from H1N1-related causes. The WHO estimated that the final death toll worldwide ending up reaching nearly 300,000.

**2020 – COVID-19**. A new coronavirus, identified just as the novel coronavirus and then the 2019 Corona Virus Disease (COVID-19), claimed its first official victim in China. At least one American traveler returning from Wuhan contracted the disease before the city is isolated. The coronavirus outbreak reached the United States; the first U.S. victim died from the disease, prompting widespread panic. The coronavirus outbreak in the U.S. is officially declared a national emergency. The Director-General of the WHO declared the

disease to have grown from epidemic proportions to a pandemic. At the urging of health officials, different states began enforcing restrictions on businesses and public gatherings to contain the disease. The economy came to a virtual standstill and unemployment soared. Local, regional, state and federal health systems and government agencies are being stressed with rapidly changing conditions. The full effects and implications on how this virus will affect community assets will not be known for so time to come.

Of these occurrences, only the Spanish Flu and COVID-19 are considered major events.

## D. Probability of Future Occurrences

The estimated risk of the future occurrence of a major infectious disease outbreak is once every 100 years or 1% in a given year.

### E. Affected Locations

The entire county would be affected.

Note that the following rankings and assessments were developed before the ongoing COVID-19 pandemic. They will be updated at the next mitigation plan update.

## F. Analysis

| Factor    | Ranking               |
|-----------|-----------------------|
| Frequency | None: No Declarations |
| Response  | > 1 Month             |
| Onset     | > 24 Hours            |
| Magnitude | No Impact             |
| Business  | > 30 Days             |
| Human     | Multiple Deaths       |
| Property  | No Impact             |

| Asset          | Impact   |
|----------------|--|
| People         | Many people will develop life-threatening conditions; many will also die. Measures to contain the spread the disease may cause emotional hardships for many. |
| Economy        | In a major pandemic, portions or even most all of the economy may be shutdown - even for a short period of time would cause ripple and long-term impacts.    |
| Infrastructure | No direct impact.  |
| Structures     | No direct impact.  |

| Structure      | Inven- | Average   | At Risk |        | Damaged |        | Damages |       |
|----------------|--------|-----------|---------|--------|---------|--------|---------|-------|
| Туре           | tory   | Value     | %       | Number | %       | Number | %       | Total |
| Residential    | 11,199 | \$204,704 |         | 0      |         | 0      |         | \$0   |
| Nonresidential | 1,075  | \$787,403 |         | 0      |         | 0      |         | \$0   |
| Critical       | 26     | \$450,000 |         | 0      |         | 0      |         | \$0   |

## III. Severe Summer Storms (includes Windstorms and Hail)

## A. Description

A thunderstorm is a rain shower during which you hear thunder. Since thunder comes from lightning, all thunderstorms have lightning. A thunderstorm is the result of convection. Usually created by surface heating, convection is upward atmospheric motion that transports whatever is in the air along with it—especially any moisture available.

Damaging winds are often called "straight-line" winds to differentiate the damage they cause from tornado damage. Strong thunderstorm winds can come from a number of different processes. Most thunderstorm winds that cause damage at the ground are a result of outflow generated by a thunderstorm downdraft. Damaging winds are classified as those exceeding 50-60 mph.

Damage from severe thunderstorm winds account for half of all severe reports in the lower 48 states and is more common than damage from tornadoes. Wind speeds can reach up to 100 mph and can produce a damage path extending for hundreds of miles.

Since most thunderstorms produce some straight-line winds as a result of outflow generated by the thunderstorm downdraft, anyone living in thunderstorm-prone areas of the world is at risk for experiencing this hazard. People living in mobile homes are especially at risk for injury and death. Even anchored mobile homes can be seriously damaged when winds gust over 80 mph.

Severe windstorms can have a devastating effect on a community. Winds can cause trees to fall and structures to fail. These can cascade into other impacts such as downed power lines, interrupting travel and power, and trees blocking roads and causing damage to close-by structures.

Hail is often produced by severe thunderstorms. Hail is a form of precipitation that occurs when updrafts in thunderstorms carry raindrops upward into extremely cold areas of the atmosphere where they freeze into balls of ice. Hail can damage aircraft, homes and cars, and can be deadly to livestock and people.

Hailstorms are a potentially damaging outgrowth of severe thunderstorms. Hailstorms frequently accompany thunderstorms, so their locations and spatial extents overlap. Hail can cause substantial damage to vehicles, roofs, landscaping, and other areas of the built environment. U.S. agriculture is typically the area most affected by hailstorms, which cause severe crop damage even during minor events.

Hail is usually pea-sized to marble-sized, but big thunderstorms can produce big hail.

#### **B.** Extent of Hazard

A thunderstorm is classified as "severe" when it contains one or more of the following: hail one inch or greater or winds gusting in excess of 50 knots (57.5 mph). Additionally, rainfall rates greater than 2 inches per hour or one that produces hail indicates a severe thunderstorm.

The severity of hailstorms is measured in hail size. Hail of .75-inch diameter is considered to be damaging.

Significant events as recorded by NCEI and local sources are considered occurrences.

## C. Historical Occurrence

The following major occurrences (injuries, deaths, total damage \$5,000 or greater) were recorded by the National Centers for Environmental Information (NCEI)<sup>22</sup> and local records. Available narratives of major events follow the table.

| allable narratives of | ,          | ıries | ıths | perty Damage<br>1000 | p Damage<br>1000 |

#### Thunderstorm Wind - 6/17/1994

Two barns were destroyed.

### • Thunderstorm Wind - 7/11/1996

Numerous trees downed. On a local farm, winds blew a grain leg over the top of a drying bin which caused the roof to cave in. Roof was also blown off a barn. Glass was broken in the door of the Washington Court House police department.

#### Thunderstorm Wind - 10/13/1999

A cold front pushed east from Illinois and Indiana during the afternoon hours and combined with a vigorous upper level disturbance that dropped into the Ohio Valley from the lower Great Lakes region. These factors prompted a squall line to develop ahead of the cold front that moved southeast through the Wilmington Ohio (ILN) county warning area before entering northeast Kentucky and southeast Ohio. A downburst from a thunderstorm blew a mobile home on its side causing minor injuries to the two occupants. Trees and utility poles were also uprooted and knocked across main roads and railroad tracks.

#### Hail - 5/23/2000

Large hail fell causing damage at several local car dealerships. Around 200 vehicles received some damage.

### • Thunderstorm Wind - 3/13/2001

A Semi truck was blown over along State Route 218 in Washington Court House and trees were knocked down in South Plymouth.

## High Wind - 9/3/2002

A widespread area of high winds blew down trees, power poles, and various other smaller structures and signs. At one time, approximately 100,000 people were without power. One man was killed when his semi tractor overturned, and several others were injured in automobile accidents, and when trees fell on the buildings that they were in. Two people were briefly trapped in a mobile home when a tree fell on it. The hardest hit area was just southwest of Columbus in Grove City where an 84 mph wind was recorded and several structures at the high school were damaged or destroyed.

#### • Thunderstorm Wind - 2/4/2006

A trailer and barn suffered significant damage. A carport collapsed at the same location. A semitruck was overturned on US Route 35.

#### Thunderstorm Wind - 2/4/2006

A building and pole barn were destroyed along US Route 62. Additionally, the home on the property suffered some siding damage, and a truck sustained significant damage.

#### Thunderstorm Wind - 4/10/2006

A line of severe thunderstorms affected central Ohio during the afternoon and evening ahead of a cold front.

A semi-trailer overturned along Interstate 71 near the Jeffersonville exit. A roof was peeled off of a mobile home along Prairie Road. Penny size hail occurred along State Route 41 northwest of Washington Court House.

#### • Thunderstorm Wind - 5/15/2007

Severe thunderstorms developed during the evening ahead of a cold front. A roof was taken off of a mobile home, and a barn was leveled along White Road.

#### Thunderstorm Wind - 6/2/2008

A line of severe thunderstorms developed during the late evening ahead of a strong cold front. Persistent heavy rain caused flooding, especially across west central Ohio. Numerous trees and power poles were downed along Creek Road. A barn and a garage were destroyed, along with minor structural damage to the house on the property.

## • Thunderstorm Wind - 9/1/2008

A thin convective band developed along a strong cold front during the late evening and overnight, producing isolated wind damage.

A small shed was blown onto a road near Bloomingburg. A tree fell onto a garage west of New Holland, producing minor damage to the roof and door.

## • High Wind - 9/14/2008

The remnants of hurricane Ike raced northeast through the midwest and merged with a frontal boundary across the lower Ohio Valley Sunday morning. Abundant sunshine promoted deep mixing of the atmosphere, and warm, dry air aloft translated down to the surface. Gusty winds in excess of 70 mph persisted for a period of several hours, causing significant damage and widespread power outages.

Strong winds of 40 to 50 miles per hour were sustained for several hours. Gusts over 60 mph were common. Widespread damage occurred across the region, from trees being blown down on powerlines, to significant crop losses and structural damage.

#### • Thunderstorm Wind - 4/6/2010

Southwest to northeast convective lines saw explosive development during the late day and early evening hours. Boundary interactions helped to push many of these storms to severe limits.

Farm equipment was overturned, power poles were down, and trees were down due to damaging thunderstorm winds. One tree fell onto a home.

#### Thunderstorm Wind - 7/9/2010

A cold front pushed into a thin area of instability that had developed due to the strong surface heating during the day. Convection never organized into complete lines, but some individual cells became strong to severe. Moisture had advected northward into the area in advance of the front. Motion of the storms was fairly quick and towards the east.

Trees were reported down around the area and a barn was destroyed due to damaging thunderstorm winds.

### • Thunderstorm Wind - 8/14/2010

A warm and moist air mass was in place across the region during the afternoon hours. Temperatures were in the upper 80s to lower 90s with dewpoints in the low to middle 70s. A weak mid level short wave combined with residual boundaries allowed for scattered thunderstorm development through the mid afternoon hours. These thunderstorms continued into the early evening hours.

A few trees were uprooted and part of a bean field was flattened due to damaging thunderstorm winds.

#### Thunderstorm Wind - 10/26/2010

A historically deep low pressure system sent a very strong cold front into a marginally unstable, but very sheared environment. A line of storms formed west of the area overnight and moved into the region during the peak heating hours of the day. Severe wind gusts occurred along the entire line with multiple tornadoes occurring around the region as well.

A large tree was reported down on a house due to damaging thunderstorm winds.

#### • Thunderstorm Wind - 4/20/2011

A line of storms moved through the area during the late night hours of April 19th and into the early morning hours of April 20th.

Silos, power poles, and trees were knocked down due to damaging thunderstorm winds. In addition, damage occurred to a building in the area. Several structures had windows blown in due to damaging thunderstorm winds. Structural damage was reported to homes due to damaging thunderstorm winds.

## • Thunderstorm Wind - 5/26/2011

A strong low pressure system west of the Ohio Valley approached during peak heating on May 25th. This resulted in the development of widespread severe thunderstorms with large hail and damaging winds during the afternoon and evening hours. Later in the evening, a quasi-linear convective system swept west to east across the area. The result was straight line wind damage and a few tornadoes.

A barn was destroyed due to damaging thunderstorm winds.

### Thunderstorm Wind - 6/29/2012

A very hot and potentially unstable airmass interacted with northwesterly flow aloft to produce a derecho across northern Illinois. This derecho then moved rapidly east southeast across the Ohio Valley producing widespread straight line wind damage. This rare derecho affected nearly every county in southeast Indiana, northern Kentucky, and southwestern Ohio with severe winds. This caused widespread power outages that lasted several days in some locations. Isolated large hail also occurred with the stronger portions of the system.

A tractor trailer was blown over on Interstate 71 due to thunderstorm winds. A large 100-year-old tree was uprooted due to thunderstorm winds. Other trees and branches were downed in the area. Two semi-trucks were overturned on Interstate 71. This made a total of 3 semi-trucks overturned on the interstate.

### Thunderstorm Wind - 4/29/2014

Thunderstorms developed along and south of a warm front during the afternoon. Some of these storms had the potential to become severe. The main threats from these storms were damaging winds and sub severe hail.

A barn was destroyed on Miami Trace Road due to thunderstorm winds.

## Thunderstorm Wind - 7/13/2014

Scattered thunderstorms developed during the afternoon hours ahead of a slow-moving cold front. Some of the storms produced large hail, damaging winds and locally heavy rainfall.

A camper was rolled over and heavily damaged due to thunderstorm winds, injuring a man inside the camper. A semi-trailer truck was blown over on Interstate 71 near the intersection of SR 41. Numerous trees were also downed in the area.

### • Thunderstorm Wind - 11/7/2017

A slow-moving frontal boundary combined with a moist environment to produce scattered severe storms and localized flash flooding.

A barn was destroyed on Bloomingburg New Holland Road.

## D. Probability of Future Occurrences

With 209 occurrences in the past 62 years, the probability of such an occurrence in a given year is 337% or an average of one every 4 months.

With 57 major occurrences (injuries, deaths, total damage \$5,000 or greater) in the past 62 years, the probability of such an occurrence in a given year is 92% or an average of one every 13 months.

#### E. Affected Locations

Severe summer storms affect the entire county.

## F. Analysis

| Factor    | Ranking                  |
|-----------|--------------------------|
| Frequency | Medium: 3-5 Declarations |
| Response  | < 1 Day                  |
| Onset     | 12-24 Hours              |
| Magnitude | 25-50% Land Area         |
| Business  | No Impact                |
| Human     | No Impact                |
| Property  | < 10% Damaged            |

|                | ne community Assets  |
|----------------|--|
| Asset          | Impact   |
| People         | The primary impact on people would be isolation and not being able to travel at least on primary routes for several hours – perhaps more on township roads that may be washed out. In some cases county roads, state routes and US highways may also be rendered impassible due to erosion damage.  Injuries are possible from hail and other falling objects. |
| Economy        | Loss of power affect businesses both in loss of sales and refrigeration.  Heavy rain and hail may adversely affect crops.  |
| Infrastructure | The primary vulnerable infrastructure assets are roads, culverts and bridges, damaged by erosion. Lightning may adversely affect electrical and communications systems.  |
| Structures     | All structures are at risk for rain water and hail damage. The Planning Team used the NWS's estimate of \$76,000 in damages per major event in this analysis.  |

| Structure      | Inven- | Average   | At Risk |        | Dam | aged   | Damages |          |
|----------------|--------|-----------|---------|--------|-----|--------|---------|----------|
| Туре           | tory   | Value     | %       | Number | %   | Number | %       | Total    |
| Residential    | 11,199 | \$204,704 | 3       | 336    | 2   | 7      | 5       | \$68,774 |
| Nonresidential | 1,075  | \$787,403 | 3       | 32     | 2   | 0      | 5       | \$12,696 |
| Critical       | 26     | \$450,000 | 0       | 0      | 1   | 0      | 5       | \$0      |

#### IV. Tornadoes

## A. Description

A tornado is a narrow, violently rotating column of air that extends from the base of a thunderstorm to the ground. Because wind is invisible, it is hard to see a tornado unless it forms a condensation funnel made up of water droplets, dust and debris. Tornadoes are the most violent of all atmospheric storms.

Source: NOAA<sup>23</sup>

#### **B.** Extent of Hazard

The severity of winds storms is measured in wind speed. Severe windstorms are those whose sustained winds are at least 40 mph and gusts exceed 57 mph.

The severity of tornadoes is measured by the damaged it caused and relates it back to estimated three-second wind speed. The Enhanced Fujita Scale is used to rate tornadoes.

Significant events as recorded by NCEI and local sources are considered occurrences.

| EF 0 | 65-85 mph    |
|------|--------------|
| EF 1 | 86-110 mph   |
| EF 2 | 111-135 mph  |
| EF 3 | 136-165 mph  |
| EF 4 | 166-200 mph  |
| EF 5 | Over 200 mph |

### C. Historical Occurrence

The following major occurrences (injuries, deaths, total damage \$5,000 or greater) were recorded by the National Centers for Environmental Information (NCEI)<sup>24</sup> and local records. Available narratives of major events follow the table.

| Event   | Date       | Injuries | Deaths | Property Damage<br>x \$1000 | Crop Damage<br>x \$1000 |
|---------|------------|----------|--------|-----------------------------|-------------------------|
| Tornado | 11/16/1965 | 4        |        | 250                         |                         |
| Tornado | 2/22/1971  |          |        | 25                          |                         |
| Tornado | 5/2/1983   |          |        | 250                         |                         |
| Tornado | 3/10/1986  |          | 1      | 2,500                       |                         |
| Tornado | 9/14/1990  |          |        | 2,500                       |                         |
| Tornado | 5/14/1997  |          |        | 30                          |                         |
| Tornado | 10/13/1999 |          |        | 30                          |                         |
| Tornado | 5/27/2004  | 1        |        | 50                          |                         |
| Tornado | 10/26/2010 |          |        | 75                          |                         |
| Tornado | 5/26/2011  |          |        | 35                          |                         |
| Tornado | 5/26/2011  |          |        | 50                          |                         |
| Tornado | 6/23/2016  |          |        | 110                         | 10                      |

## • Tornado - 5/14/1997

A mini supercell spawned a tornado that moved out of Clinton county into Fayette county. A shed was destroyed, a barn and 2 houses were damaged, and 8 trees were downed.

#### Tornado - 10/13/1999

A cold front pushed east from Illinois and Indiana during the afternoon hours and combined with a vigorous upper level disturbance that dropped into the Ohio Valley from the lower Great Lakes region. These factors prompted a squall line to develop ahead of the cold front that moved southeast through the Wilmington Ohio (ILN) county warning area before entering northeast Kentucky and southeast Ohio. A brief touchdown flipped over several pontoon boats, destroying at least one. Several utility poles and trees were knocked down along with well-anchored signs being ripped off of a local business.

#### • Tornado - 5/27/2004

A tornado touched down near Ghormley and traveled east into western Ross County. Three barns were severely damaged, with one man suffering injuries from being trapped in one of the damaged barns.

#### Tornado - 10/26/2010

A historically deep low pressure system sent a very strong cold front into a marginally unstable, but very sheared environment. A line of storms formed west of the area overnight and moved into the region during the peak heating hours of the day. Severe wind gusts occurred along the entire line with multiple tornadoes occurring around the region as well.

Along the path of the tornado, several trees were snapped and several structures lost parts or all of their roofs. The heaviest damage occurred to a large storage facility which suffered major roof loss and total collapse of the northern half of the structure.

#### • Tornado - 5/26/2011

A strong low pressure system west of the Ohio Valley approached during peak heating on May 25th. This resulted in the development of widespread severe thunderstorms with large hail and damaging winds during the afternoon and evening hours. Later in the evening, a quasi-linear convective system swept west to east across the area. The result was straight line wind damage and a few tornadoes.

A National Weather Service storm survey confirmed a tornado about five miles north of Bloomingburg. The tornado damaged the flat metal roof of a small barn and a large section of roof from another barn.

#### • Tornado - 5/26/2011

A strong low pressure system west of the Ohio Valley approached during peak heating on May 25th. This resulted in the development of widespread severe thunderstorms with large hail and damaging winds during the afternoon and evening hours. Later in the evening, a quasi-linear convective system swept west to east across the area. The result was straight line wind damage and a few tornadoes.

A National Weather Service storm survey confirmed that a tornado touched down three miles west of Bloomingburg. Near the beginning of the path one barn was damaged and another barn was destroyed. Further along the path another barn was damaged.

### • Tornado - 6/23/2016

A mesoscale convective system developed across Illinois and worked east then southeast across the region during the early morning hours of June 23rd. The first sign of tornadic damage was observed near the corner of Palmer Road NW and Harmony Road. Siding was removed from multiple sides of a two-story home, particularly on the southeast facing side. Large tree limbs were also knocked down near this residence. Damage continued to the southeast along Harmony Road and onto Burnett Perrill Road. Damage primarily affected hardwood trees, and several large branches were snapped from the trees. The orientation of the trees exhibited a convergent pattern to the damage. Siding was also removed from a garage at a residence on Burnett Perrill Road. Near the intersection of Burnett Perrill Road and Jasper-Coil Road, numerous evergreen trees were snapped or uprooted on the Jasper-Coil Road side. The tornado moved across a cornfield and then across Bush Cemetery on Bush Road. Tree damage at Bush Cemetery was extensive and consisted of both snapped and uprooted trees thrown in multiple directions. A welldefined swirl was noted in the cornfield to the southeast of Bush Cemetery. The most significant damage was observed along U.S. Route 22. Two homes along the 3700 block of US Route 22 suffered structural damage. One of the homes suffered partial uplift of the roof and a significant loss of the covering of the roof. The garage was also heavily damaged and the front porch was lifted. Leaf and other debris splatter was observed on all sides of the home. Spruce trees were uprooted and large limbs from other trees were broken. The residence located on the opposite side of U.S. Route 22 had shingles and siding removed. An un-attached one car garage was also destroyed. Damage in this area was estimated to be EF1 in nature, with maximum winds near 100 mph. To the southeast of this area, sporadic damage to trees and power poles was noted, however the damage was more consistent with straight-line winds. The survey also concluded that damage in the Jasper Mills area was also caused by straight-line winds.

### D. Probability of Future Occurrences

With 16 occurrences in the past 44 years, the probability of such an occurrence in a given year is 30% or an average of one every 41 months.

With 12 major occurrences (injuries, deaths, total damage \$5,000 or greater) in the past 54 years, the probability of such an occurrence in a given year is 22% or an average of one every 41 months.

#### E. Affected Locations

Tornadoes affect the entire county.

# F. Analysis

| Factor    | Ranking               |
|-----------|-----------------------|
| Frequency | Low: 1-2 Declarations |
| Response  | < 1/2 Day             |
| Onset     | 6-12 Hours            |
| Magnitude | 10% Land Area         |
| Business  | No Impact             |
| Human     | Some Injuries         |
| Property  | 10-25% Damaged        |

|                | are community record  |
|----------------|---|
| Asset          | Impact  |
| People         | The primary impact on people would be isolation and not being able to travel at least on primary routes for about 12 hours after the storm subsided. Power outages would also be widespread.  |
| Economy        | Loss of power affect businesses both in loss of sales and refrigeration.  |
| Infrastructure | Electricity is likely to be out for a period of time. As this time increases, other utilities dependent on power will also likely fail.   |
| Structures     | Buildings under construction and mobile homes are highly susceptible to high winds could be damaged or destroyed. Buildings adjacent to large trees may be damaged by falling trees. Roofs and siding could also be damaged. Much of insured damages are not reported. The Planning Team used the NWS's estimate of \$500,000 in damages per major event was used in this analysis. |

|                | Inven- | Average   | At Risk |        | Dam | aged   | Damages |           |  |

## V. Hazardous Materials Release

## A. Description

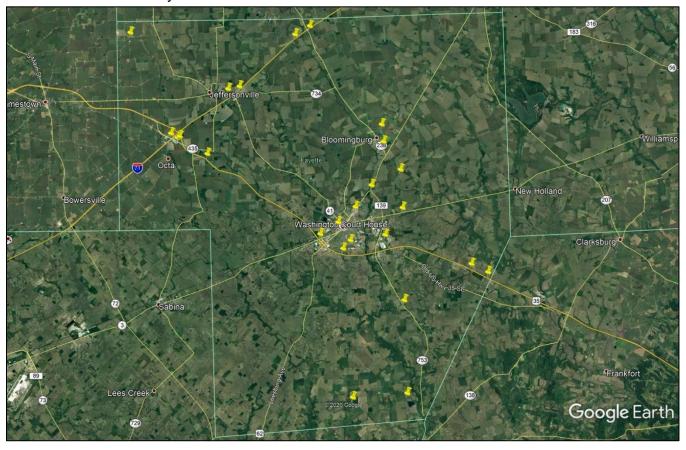

A Hazardous Material Release is an improper leak, spillage, discharge, or disposal of hazardous materials or substances (such as explosives, toxic chemicals, and radioactive materials) that poses a significant threat to human health and safety, campus property, and the surrounding environment. A release may occur at a fixed facility, pipeline or during transportation.

### B. Extent of Hazard

An occurrence would be indicated by a spill reported to the EPA and any additional spills included by the Fayette County Local Emergency Planning Committee (LEPC).

#### C. Historical Occurrence

As recorded by the Ohio EPA Office of Emergency Response<sup>25</sup>, the following spills occurred between May 2017 and August 2020, a 39-month span). No additional spills were included by the LEPC

| Date      | Product Type               | Gal | Latitude    | Longitude   | Jurisdiction           |

The following categorizes and summarizes the above data.

| Product Type               | Percent |
|----------------------------|---------|
| Fuels (Combustible FP100F) | 50.00%  |
| Oils and Grease            | 11.76%  |
| Other                      | 8.82%   |
| Glycol                     | 5.88%   |
| Unknown/Undetermined       | 5.88%   |
| Chemicals - Fertilizers    | 2.94%   |
| Chemicals - Pesticides     | 2.94%   |
| Compressed Gases           | 2.94%   |
| Crude Oil                  | 2.94%   |
| Sheen (hydrocarbon)        | 2.94%   |
| Transformer Oil (Non-PCB)  | 2.94%   |
| Total                      | 100.00% |

The November 2019 Commodity Flow Study reflected this data, finding that 42% of traffic is carrying fuel or some other flammable liquid (Guide Number 128). In reviewing the amounts of the reported spilled gallons of Fuels, the higher percentage (50%) reflects the fact that most transport vehicles carry 50 to 100 gallons of fuel in their fuel tanks, potentially to be ruptured in any crash.

## D. Probability of Future Occurrences

As there have been no reported incidents of spills at fixed facilities, the probability of such a spill is very low.

With 16 occurrences of transportation spills in 39 months, the probability in a given year is 1046% or an average of one every month.

#### E. Affected Locations

While a transportation spill could occur on any road within the county, the likely affected locations are on or adjacent to major highways, specifically I 71, US 22, US 35, US 62, SR 435, and SR 753. The November 2019 Commodity Flow Study validated these locations, showing the following rank order of highways conveying placarded vehicles:

- 171
- US 22
- US 35
- US 62

# F. Analysis

| Factor    | Ranking               |
|-----------|-----------------------|
| Frequency | Low: 1-2 Declarations |
| Response  | < 1 Day               |
| Onset     | < 6 Hours             |

#### VI. Dam Failures

## A. Description

A dam is a barrier that impounds water or underground streams. The reservoirs created by dams not only suppress floods but provide water for various needs to include irrigation, human consumption, industrial use, aquaculture and navigability. Hydropower is often used in conjunction with dams to generate electricity. A dam can also be used to collect water or for storage of water which can be evenly distributed between locations. Dams generally serve the primary purpose of retaining water, while other structures such as floodgates or levees (also known as dikes) are used to manage or prevent water flow into specific land regions. Source: Wikipedia<sup>26</sup>

A dam failure is partial, complete or catastrophic release of water held behind a dam that results in down-stream flash flooding. In Ohio, dams are classified by size and potential impact of failure: Class I, II, III and IV. Refer to OAC 1501:21-13-01(A)<sup>27</sup>

The following Class I and II dams in Fayette County that are rated in the High or Significant Hazard Class as listed in the US Army Corps of Engineers' National Inventory of Dams<sup>28</sup>:

|  |         | Class | Hazard      |                             |                           |      | Emergency Action |
|--|---------|-------|-------------|-----------------------------|---------------------------|------|------------------|
| Dam Name                               | NIDID   | 1/11  | Potential   | River                       | City/Distance             | (mi) | Plan Status      |
| Washington Court<br>House UG No. 1 Dam | OH00627 | I     | High        | Paint Creek -<br>Offstream  | Washington<br>Court House | 3.6  | Approved         |
| Washington Court<br>House UG No. 2 Dam | OH03013 | II    | Significant | Tributary to Paint<br>Creek | Washington<br>Court House | 3    | None Approved    |

#### B. Extent of Hazard

An occurrence would be indicated by a failure of a Class I or II dam.

#### C. Historical Occurrence

There have been no Class I or II dam failures in Fayette County. According to the Stanford University's National Performance of Dam Program (NPDP) Dam Incident database<sup>29</sup>, there have been no dam incidents in Fayette County.

### D. Probability of Future Occurrences

In the American Society of Civil Engineers 2009 Ohio Infrastructure Report Card – Dams Fact Sheet<sup>30</sup>, Ohio dams received a grade of C. One third of Ohio's dams were rated Poor or worse and 60% were rated Fair or worse. Based on these high-level ratings, no direct conclusions could be drawn about the failure of Fayette County's Class I and II dams. Because of this report, the planning team couldn't assign a value of zero; the probability of a failure in a given year is less than 1%.

#### E. Affected Locations

Failure of either reservoir would impact Washington Court House. In reviewing the flood inundation plan and maps, some 140 homes and 250 residents as well as several parks,

<sup>&</sup>lt;sup>26</sup> https://en.wikipedia.org/wiki/Dam

<sup>&</sup>lt;sup>27</sup> http://codes.ohio.gov/oac/1501:21-13-01

| Nonresidential | 1,075  | \$787,403 |   | 12              | 50 | 6      | 15      | \$708,663   |

## VII. Drought

## A. Description

Drought is characterized by a period of extreme dry weather usually complicated by warm temperatures. It is a deficiency in precipitation over an extended period, usually a season or more, resulting in a water shortage causing adverse impacts on vegetation, animals, and/or people. It is a normal, recurrent feature of climate that occurs in virtually all climate zones, from very wet to very dry. Drought is a temporary aberration from normal climatic conditions; thus it can vary significantly from one region to another. Drought is different than aridity, which is a permanent feature of climate in regions where low precipitation is the norm, as in a desert. Human factors, such as water demand and water management, can exacerbate the impact that drought has on a region. Because of the interplay between a natural drought event and various human factors, drought means different things to different people. In practice, drought is defined in a number of ways that reflect various perspectives and interests. Below are three commonly used definitions:

Meteorological Drought is usually defined based on the degree of dryness (in comparison to some "normal" or average) and the duration of the dry period. Drought onset generally occurs with a meteorological drought.

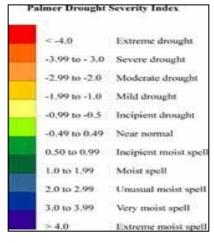

Agricultural Drought links various characteristics of meteorological (or hydrological) drought to agricultural impacts, focusing on precipitation shortages, soil water deficits, reduced ground water or reservoir levels needed for irrigation, and so forth.

Hydrological Drought usually occurs following periods of extended precipitation shortfalls that impact water supply (i.e., streamflow, reservoir and lake levels, ground water), potentially resulting in significant societal impacts. Because regions are interconnected by hydrologic systems, the impact of meteorological drought may extend well beyond the borders of the precipitation-deficient area. Source: NOAA<sup>31</sup>

#### B. Extent of Hazard

Drought severity is measured using the Palmer Drought Severity Index (PDSI). The PDSI uses readily available temperature and precipitation data to estimate relative dryness. It is a standardized index that spans -10 (dry) to +10 (wet). It has been reasonably successful at quantifying long-term drought. This table translates PDSI indices to plain language.

Droughts declared by the federal or state officials are considered occurrences.

## C. Historical Occurrence

The following occurrences caused damage to community assets. Available narratives of major events follow. Primary Source: National Centers for Environmental Information (NCEI)<sup>32</sup>.

## • 1988-1989 North American Drought

The Western United States experienced a lengthy drought in the late 1980s. Much of California endured one of its longest droughts ever observed from late 1986 through

<sup>31</sup> http://www.nws.noaa.gov/os/brochures/climate/DroughtPublic2.pdf

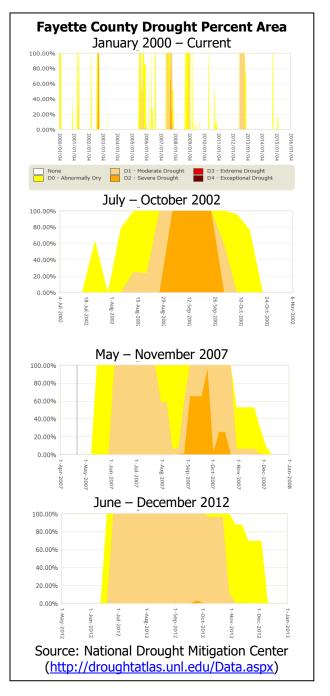

<sup>32</sup> http://www.NCEI.noaa.gov/stormevents/

early 1991. Drought worsened in 1988 as much of the United States also suffered from severe drought. In California, the five-year drought ended in late 1991 as a significant El Niño event in the Pacific Ocean (and the eruption of Mount Pinatubo in June 1991) most likely caused unusual persistent heavy rains.

Following a milder drought in the Southeastern United States and California in 1987, this drought overspread the Mid-Atlantic states, Southeastern United States, Midwestern United States, northern Great Plains, and Western United States. Heat waves accompanied this widespread, unusually intense drought and killed around 4,800 to 17,000 Americans. The heat also killed livestock across the United States. Farmers perhaps cultivated marginally arable land, contributing to the damage from

this drought. Pumping groundwater near depletion also contributed to damage. The drought destroyed crops almost nationwide; lawns of residents went brown, and many cities declared water restrictions. Wildfires in Yellowstone National Park burned many trees and created exceptional destruction in the area. This very catastrophic drought for multiple reasons continued across the Upper Midwest and northern Great Plains states during 1989, not officially ending until 1990. The conditions continued into 1989 and 1990, although the drought ended in some states, thanks to normal rainfalls returning to some portions of the United States. Dry conditions, however, increased again during 1989, affecting Iowa, Missouri, eastern Nebraska, Kansas and certain portions of Colorado. The drought also affected Canada in certain divisions.

The drought of 1988 ranks as the worst drought since the Dust Bowl a half-century earlier in the United States; estimates in 2008 put damages from the drought between \$80 billion and almost \$120 billion in damage (2008 USD). The state of Minnesota alone saw \$1.2 billion in crop losses. The drought of 1988 caused more devastation comparable to that which Hurricane Andrew in 1992 and Hurricane Katrina wrought. In Canada, drought-related losses added to \$1.8 billion (1988 Canadian dollars).

Source: Project Gutenberg Self-Publishing Press<sup>33</sup>

## • Summer 1999 Drought

Drought conditions existed in Fayette County for a five-month period during the summer of 1999.

May 1999. After a dry April, drought conditions resurfaced again during May, after being alleviated during the winter months. Total rains during May were only 1.25 to 2.5 inches. The community of Fayette had only 1.3 inches for the entire month, McArthur had 1.5 inches, while South Point measured 1.9 inches.

June 1999. The drought continued to spread and strengthen in southeast Ohio. A deterioration in stream flow and soil moisture was noted. Some showers at the end of the month temporarily helped the topsoil and the crops. Only 1 to 2 inches of rain fell in most areas during the entire month of June. Nelsonville observed the minimum, with just a half inch of rain. Temperatures peaked in the mid and upper 90s during the second week of the month. Beverly registered 98 degrees, while South Point had 97 degrees on the 10th.

July 1999. The drought strengthened during the first half of the month, then eased slightly during the last 2 weeks. The worst drought conditions remained in Athens, Lawrence, Gallia, Meigs, and Fayette Counties. In Lawrence County, an emergency drought declaration was issued. Delivery of water to residents with dry or contaminated wells continued in Lawrence County. The town of Rio Grande in Gallia County had to connect to another water system when their source was depleted. In Fayette County, filling stations were set-up for families that had problems with their wells.

The extreme heat depleted much of the moisture from the scattered showers. Preliminary data indicated Beverly of Washington County and South Point of Lawrence County both reached 102 degrees on the 30th.

August 1999. The drought eased during the month of August across southeast Ohio. Monthly rains were 3 to 6 inches. Temperatures were not as hot, as those felt during July. However, the drought still lingered at month's end.

September 1999. Drought severity either increased or remain about constant during the month. The rainfall during September was mostly between 1 to 2 inches. Yet, South Point of Lawrence County had even less rain, with just three quarters of an inch.

October 1999. The drought severity eased as monthly rainfall was near normal. Amounts of 2.5 to 3.0 inches were common. Ground water shortages were still a concern at the end of the month.

### • Summer 2002 Drought

Two months moderate; two months severe. The emerging drought from August peaked during the first 2 weeks of September, as hot and dry conditions lingered. Rains of 1.5 to 2 inches, plus cooler temperatures, dampened the drought by the fourth week of the month.

## • Fall 2007 Drought

Three months moderate; one month severe. In September, drought conditions crept north, as the month averaged warmer and drier than normal. The monthly rainfall was mostly between 1 and 2 inches.

7

<sup>33</sup> http://self.gutenberg.org/articles/1988%E2%80%9389\_North\_American\_drought

A rare October heat wave, during the 1st and 2nd weeks of the month, helped peak the severity of the drought. On the 11th, Gallia County declared an emergency due to a water shortage. With the lowering of the water table, wells were becoming less productive. Morgan County officials reported that their wildlife was being stressed from the lack of available water. Deer were dying from the effects of the drought and a dry weather disease.

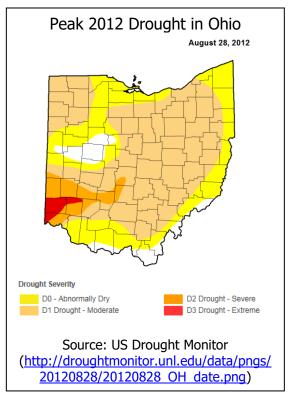

Much needed and widespread rain finally arrived on the 23rd and the 24th. Rain amounts of 2 to 3 inches were common. As the growing season ended and the autumn foliage peaked, drought conditions began to abate or ease.

After peaking in early October, drought conditions continued to ease during the month

of November. Monthly rainfall of 3 to 4 inches was common. By the end of November, the drought of 2007 was also coming to an end across southeast Ohio.

## • 2012 North American Drought

The 2012-2013 North American Drought was an expansion of the 2010-2012 United States drought which began in the spring of 2012, when the lack of snow in the United States caused very little melt water to absorb into the soil. The drought includes most of the United States and included Ohio. Among many counties, Fayette County was designated with moderate drought conditions by mid-June. It has been equaled to similar effects as droughts in the 1930s and 1950s, but it has not been in place as long. However, the drought has inflected, and is expected continue to inflict, catastrophic ramifications. economic In most

measures, the drought has exceeded the 1988-1989 North American Drought, which is the most recent comparable drought.

On July 30, 2012, the Governor of Ohio sent a memorandum to the United States Department of Agriculture's (USDA) Ohio State Executive Director requesting primary county natural disaster designations for eligible counties due to agricultural losses caused by drought and additional disasters during the 2012 crop year. The USDA reviewed and Loss Assessment Reports and determined that there were sufficient production losses in 85 counties to warrant a Secretarial disaster designation. On September 5, 2012, Fayette County was one of those designated counties. Source: Ohio EMA.

The 2012 North American Drought is the largest drought since the 1950's as reported by NOAA's National Climatic Data Center National Drought Report of 15 August 2012<sup>34</sup>. At its peak in Ohio, Fayette County experienced "Moderate Drought Severity"

\_

<sup>34</sup> http://www.NCEI.noaa.gov/sotc/drought/201207#det-reg

for four months. The University of Illinois at Urbana-Champaign reported a slightly elevated crop insurance loss ratio of 1.02 for 2012, indicating little insurance-reported crop loss during this period<sup>35</sup>. Fayette County had no reported crop losses. Source: NCEI<sup>36</sup>

## D. Probability of Future Occurrences

With five major occurrences in the past 28 years, the probability of an occurrence in a given year is 18%. None resulted in recorded damages; the probability of a damaging occurrence in a given year is close to 0%.

#### E. Affected Locations

Drought affects the entire county. The Fayette County Health Department estimates that 30-40% of the county's population uses private wells and that the county has plans for providing for the needs of this population during a drought. Public water supplies are generally considered to be adequate to withstand periods of drought. The greatest impact would be on water supplies for livestock and crops.

## F. Analysis

| Factor    | Ranking               |

## VIII. Flooding

## A. Description

Flooding is an overflowing of water onto land that is normally dry. Floods can happen during heavy rains, when ocean waves come on shore, when snow melts too fast, or when dams or levees break. Flooding may happen with only a few inches of water, or it may cover a house to the rooftop. They can occur quickly or over a long period and may last days, weeks, or longer. Floods are the most common and widespread of all weather-related natural disasters.

Flash floods are the most dangerous kind of floods, because they combine the destructive power of a flood with incredible speed and unpredictability. Flash floods occur when excessive water fills normally dry creeks or riverbeds along with currently flowing creeks and rivers, causing rapid rises of water in a short amount of time. They can happen with little or no warning.

Areas near rivers are at risk from flash floods. Embankments, known as levees, are often built along rivers and are used to prevent high water from flooding bordering land. In 1993, many levees failed along the Mississippi River, resulting in devastating flash floods. The city of New Orleans experienced massive devastating flooding days after Hurricane Katrina came onshore in 2005 due to the failure of levees designed to protect the city.

Mountains and steep hills produce rapid runoff, which causes streams to rise quickly. Rocks and clay soils do not allow much water to infiltrate the ground. Saturated soil also can lead rapidly to flash flooding. Vacationing or recreating along streams or rivers can be a risk if there are thunderstorms in the area. A creek only 6 inches deep in mountainous areas can swell to a 10-foot deep raging river in less than an hour if a thunderstorm lingers over an area for an extended period of time.

Additional high-risk locations include low water crossings, recent burn [or logging] areas in mountains, and urban areas from pavement and roofs which concentrate rainfall runoff. Ice jams and snowmelt can help cause flash floods. A deep snowpack increases runoff produced by melting snow. Heavy spring rains falling on melting snowpack can produce disastrous flash flooding. Melting snowpack may also contribute to flash floods produced by ice jams on creeks and rivers. Thick layers of ice often form on streams and rivers during the winter. Melting snow and/or warm rain running into the streams may lift and break this ice, allowing large chunks of ice to jam against bridges or other structures. This causes the water to rapidly rise behind the ice jam. If the water is suddenly released, serious flash flooding could occur downstream. Huge chunks of ice can be pushed onto the shore and through houses and buildings.

#### **B.** Extent of Hazard

The severity of flooding is measured in terms of inches of rain per hour, total inches per occurrence and the effect on community assets.

Significant events as recorded by NCEI and local sources are considered occurrences. Major occurrences are those that caused injuries, deaths or total damage \$5,000 or greater.

### C. Historical Occurrence

The following major occurrences (injuries, deaths, total damage \$5,000 or greater) were recorded by the National Centers for Environmental Information (NCEI)<sup>37</sup> and local records. Available narratives of major events follow the table.

<sup>37</sup> http://www.NCEI.noaa.gov/stormevents/

| Event       | Date      | Injuries | Deaths | Property<br>Damage<br>x \$1000 | Crop<br>Damage<br>x \$1000 |
|-------------|-----------|----------|--------|--------------------------------|----------------------------|
| Flash Flood | 6/30/1997 |          |        | 5                              | 0                          |
| Flash Flood | 1/3/2000  |          |        | 10                             |                            |
| Flash Flood | 5/18/2001 |          |        | 10                             |                            |
| Flash Flood | 6/6/2001  |          |        | 5                              |                            |
| Flood       | 1/5/2005  |          |        | 20                             |                            |
| Flood       | 1/11/2005 |          |        | 10                             |                            |
| Flash Flood | 10/4/2006 |          |        | 5                              |                            |

#### Flash Flood - 6/30/1997

Persistent heavy rainfall caused water to flood across Rt. 207.

#### Flash Flood - 3/1/2000

Several hours of heavy rainfall caused water to flood across roads across the county.

## • Flash Flood - 5/18/2001

Several hours of heavy rainfall caused flooded streets.

#### • Flash Flood - 6/6/2001

High water on US 62 and Washington Road.

#### • Flood - 5/1/2005

A stationary frontal boundary draped across the Ohio Valley was the focusing mechanism for an extended period of heavy rain across much of central and southern Ohio. Many locations received two to four inches of rain in a 24-hour period.

### • Flood - 11/1/2005

A widespread area of showers and thunderstorms ahead of a warm front affected much of central and western Ohio. One to three inches of rain fell across the region, exacerbating existing flooding from previous rains and snowmelt.

#### Flash Flood - 4/10/2006

A line of severe thunderstorms affected central Ohio during the afternoon and evening ahead of a cold front. Several creeks rose out of their banks from the heavy rainfall.

#### Flood - 3/19/2008

Several waves of low pressure moved along a stationary front located across the Ohio Valley. The waves of low pressure brought an extended period of heavy rain, with three to six inches of rainfall across southwest and central Ohio.

Numerous roads were flooded throughout the county. Paint Creek rose out of its banks into Eyman Park in Washington Court House.

### Flash Flood - 11/5/2011

A very unstable airmass was in place south of a warm front in the area. This unstable airmass led to the development of widespread severe weather.

One family was evacuated from their residence due to flash flooding.

## D. Probability of Future Occurrences

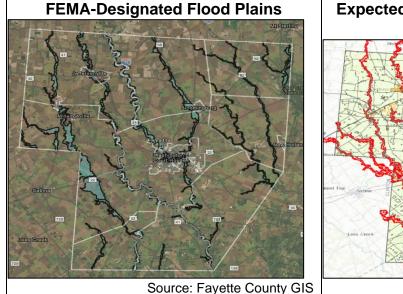

With 40 occurrences in the past 22 years, the probability of such an occurrence in a given year is 182% or an average of one every 7 months.

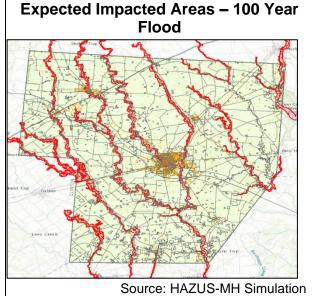

With 9 major occurrences (injuries, deaths, total damage \$5,000 or greater) in the past 22 years, the probability of such an occurrence in a given year is 41% or an average of one every 29 months.

### E. Affected Locations

Flooding affects the entire county, primarily in the flood plains. There are mapped flood plain areas along Paint and Deer Creeks as well as many small and intermittent creeks. Areas not identified as being in a flood plain can experience flooding as well. The National Flood Insurance Administration estimates that one-third of the claims that they receive are for structures located outside of a mapped flood plain.

The FEMA HAZUS – Multi-Hazard Risk Assessment Program simulation<sup>38</sup> results for a 100-year flood affecting Fayette County was used to estimate damages and impact on community assets.

A Repetitive Loss Property is any insurable building for which two or more claims of more than \$1,000 were paid by the National Flood Insurance Program (NFIP) within any

<sup>38</sup> Provided by Ohio EMA, available in Fayette County EMA Office

rolling ten-year period, since 1978. A repetitive loss property may or may not be currently insured by the NFIP.

A **Severe Repetitive Loss Property** any NFIP-insured residential property that has met at least 1 of the following paid flood loss criteria since 1978, regardless of ownership:

- 4 or more separate claim payments of more than \$5,000 each (including building and contents payments); or
- 2 or more separate claim payments (building payments only) where the total of the payments exceeds the current value of the property.<sup>39</sup>

Structures that flood frequently strain the National Flood Insurance Fund. Community leaders and residents are also concerned with the repetitive loss problem because residents' lives are disrupted and may be threatened by the continual flooding. The primary objective of the repetitive loss properties strategy is to eliminate or reduce the damage to property and the disruption to life caused by repeated flooding of the same properties.<sup>40</sup>

There are no repetitive loss structures reported in Fayette County as of September 30, 2018<sup>41</sup>.

## F. Analysis

| Factor    | Ranking               |
|-----------|-----------------------|
| Frequency | Low: 1-2 Declarations |
| Response  | < 1/2 Day             |
| Onset     | 12-24 Hours           |
| Magnitude | 10% Land Area         |
| Business  | No Impact             |
| Human     | No Impact             |
| Property  | No Impact             |

| Asset          | Impact   |
|----------------|--|
| People         | Major flooding potentially affects a large portion of the population, either directly or indirectly. This includes structural damages, isolation from essential services, need for relocation or sheltering, injuries and possibly death.  Causalities. HAZUS-MH estimates no causalities.  Displaced and Sheltered. HAZUS-HM estimates 940 people would be displaced and 19 of the these would seek shelter in public shelters. |
| Economy        | Flooded businesses would be out of business until clean up and repairs are completed and damaged inventory replaced. HAZUS-MH estimates \$53.05 million in economic losses.  |
| Infrastructure | The primary vulnerable infrastructure assets are roads, culverts and bridges, damaged by erosion. HAZUS-MH doesn't simulate these damages.   |
| Structures     | The Planning Team used the results of FEMA's HAZUS-MH simulation of a 100-year flood for Fayette County. HAZUS-MH estimates the following structural damages. Critical facilities had no impact.   |

## IX. Earthquakes

## A. Description

An earthquake is caused by a sudden slip on a fault. The tectonic plates are always slowly moving, but they get stuck at their edges due to friction. When the stress on the edge overcomes the friction, there is an earthquake that releases energy in waves that travel through the earth's crust and cause the shaking that we feel.

Ohio is located near the New Madrid fault. Fayette County is in the part of Ohio that is designated with a Modified Mercalli Intensity (MMI) of VIII, which anticipates moderate damage. In spite of this, there has been little seismic activity near Fayette County.

#### B. Extent of Hazard

Earthquakes are typically measured on the Richter scale. The analyzed profile is a magnitude 5.0 earthquake with the epicenter in the City of Fayette scenario as modeled by the Hazards U.S. Multi-Hazard (HAZUS-MH) simulation preformed and provided by Ohio EMA. The HAZUS-MH report used in this analysis is available from the Fayette County EMA.

The impact of earthquakes is measured on the Modified Mercalli Scale. The table at the right depicts the sale and its relationship to the Richter Scale.

Any recorded earthquake of magnitude 3 or more is considered an occurrence.

| М    | odified Mercalli Scale   | Richter<br>Magnitude<br>Scale |
|------|--|-------------------------------|
| 1    | Detected only by sensitive instruments   | 1.5                           |
| п    | Felt by few persons at rest, especially<br>on upper floors; delicately suspended<br>objects may swing                        | 2                             |
| Ш    | Felt noticeably indoors, but not always recognized as earthquake; standing autos rock slightly, vibration like passing truck | 2.5                           |
| IV   | Felt indoors by many, outdoors by few, at night some may awaken; dishes, windows, doors disturbed; autos rock noticeably     | 3 —                           |
| v    | Felt by most people; some breakage of dishes, windows, and plaster; disturbance of tall objects                              | 3.5                           |
| VI   | Felt by all, many frightened and run<br>outdoors; falling plaster and chimneys,<br>damage small                              | 4.5                           |
| VII  | Everybody runs outdoors; damage to buildings varies depending on quality of construction; noticed by drivers of autos        | 5 =                           |
| VIII | Panel walls thrown out of frames; fall of walls, monuments, chimneys; sand and mud ejected; drivers of autos disturbed       | 5.5                           |
| IX   | Buildings shifted off foundations,<br>cracked, thrown out of plumb; ground<br>cracked; underground pipes broken              | 6 —                           |
| x    | Most masonry and frame structures destroyed; ground cracked, rails bent, landslides  | 6.5 —<br>7 —                  |
| ΧI   | Few structures remain standing; bridges destroyed, fissures in ground, pipes broken, landslides, rails bent                  | 7.5                           |
| XII  | Damage total; waves seen on ground surface, lines of sight and level distorted, objects thrown up in air                     | 8 —                           |

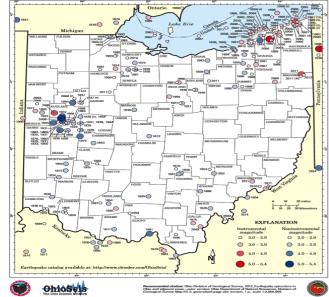

#### C. Historical Occurrence

The Ohio Department of Natural Resources map below indicates no seismic activity centered in Fayette. In 1995, there was an earthquake of a 3.5 magnitude centered in south east Highland County.

## D. Probability of Future Occurrences

The USGS reports a 2% probability that Fayette County will be faced with a peak ground acceleration (PGA) of .06 within 50 years. While the USGS hasn't drawn a direct correlation between PGA and magnitude, the Laboratorio de Ingeniería Sísmica, Instituto de Investigaciones en Ingeniería,

Universidad de Costa Rica<sup>42,</sup> published research<sup>43</sup> estimating this relationship. A PGA of 2 to 3 relates to a Modified Mercalli Intensity of II and magnitude of 2, characterized as "Felt only by a few persons at rest, especially on upper floors of buildings." Source: USGS<sup>44.</sup>

There is less than a 1% probability of a significant damaging occurrence in any given year.

## **E. Affected Locations**

Earthquakes would affect the entire county.

## F. Analysis

| Factor    | Ranking        |
|-----------|----------------|
| Frequency | Slight         |
| Response  | < 1/2 Day      |
| Onset     | > 24 Hours     |
| Magnitude | 10% Land Area  |
| Business  | < 24 Hours     |
| Human     | Minor Injuries |
| Property  | < 10% Damaged  |

|                | able Community Access   |
|----------------|---|
| Asset          | Impact  |
| People         | Causalities. HAZUS-MH estimates that 111 people would receive minor injuries, 26 people would receive greater non-life-threatening injuries, 4 people would receive life-threating injuries and 7 people would die. Estimates were computed by averaging the three representative time frames presented by HAZUS.  Displaced and Sheltered. HAZUS-HM estimates 269 households would be be displaced; of these, 169 people (less than 1% of the population) people would seek shelter in public shelters.  Electric Service. HAZUS-MH estimates that 71% of households (8,066) would lose electricity at onset. After one week, 17% (1,914) would still be without electricity. Virtually all (less 10) would have electricity after three months.  Potable Water. HAZUS-MH estimates that 3% of households (400) would lose potable at onset. Within one week, all would be restored. |
| Economy        | HAZUS-MH estimates a total economic loss of \$425.84 million.   |
| Infrastructure | HAZUS-HM estimates all infrastructure would unaffected or operational within one day with the exception 3 bridges, all of which would operational within 1 week. It also estimates that 4 wastewater treatment systems would have moderate damage; all would be operational within 1 day. 1 of 3 communication systems would have be damaged and be restored in 1 week.   |
| Structures     | The Planning Team used the results of FEMA's HAZUS-MH simulation of an earthquake of 5 magnitude, 5 km deep centered on Washington Courthouse. HAZUS-MH estimates the following structural damages.   |

#### X. Land Subsidence

## A. Description

Land subsidence is typically caused by underground voids caused by underground mining – particularly mines that have been abandoned – and Karst Topography.

Subsidence, in the context of underground mining, is the lowering of Earth's surface due to collapse of bedrock and unconsolidated materials (sand, gravel, silt, and clay) into underground mine voids. Mine subsidence can damage the foundations of homes, buildings and roads, disrupt underground utilities, and can be a potential risk to human life. Source: ODNR<sup>45</sup>

Karst Topography is a landform that develops on or in limestone, dolomite, or gypsum by dissolution and that is characterized by the presence characteristic features such as sinkholes, underground (or Internal) drainage through solution-enlarged fractures (joints), and caves. Karst landforms and features can be a significant geologic hazard. Sudden collapse of an underground cavern or opening of a sinkhole can cause surface subsidence that can severely damage or destroy any overlying structure such as a building, bridge, or highway.

#### B. Extent of Hazard

Land subsidence is measured by a count of occurrences that cause damage to structures or restrict travel.

#### C. Historical Occurrence

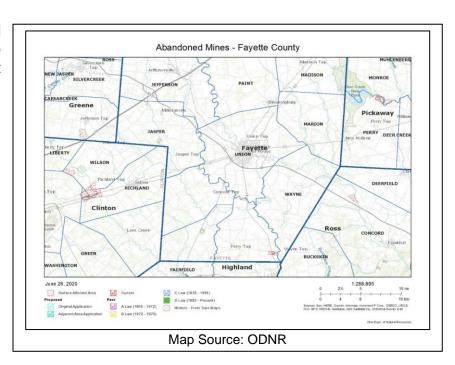

There is no record of structural damage or injuries caused by subsidence in Fayette County.

## D. Probability of Future Occurrences

Land subsidence has occurred in Fayette County but impact on community assets has been minimal. Therefore, the estimated risk of the future occurrence of impacting subsidence is once in twenty years or 5% in a given year.

#### E. Affected Locations

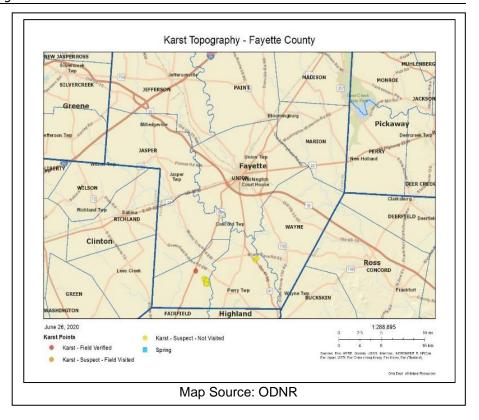

There is an abandoned underground mine in the extreme southeast corner of the county.

<sup>45</sup> http://geosurvey.ohiodnr.gov/geologic-hazards/abandoned-underground-mines/aum-home

Section V - Hazard Profiles, Analyses and Vulnerable Assets

There is a confirmed location of karst topography (red dot) as well as several suspected locations (yellow dot) in the southern part of the county

## F. Analysis

| Factor    | Ranking               |
|-----------|-----------------------|
| Frequency | None: No Declarations |
| Response  | < 1/2 Day             |
| Onset     | > 24 Hours            |
| Magnitude | 10% Land Area         |
| Business  | No Impact             |
| Human     | No Impact             |
| Property  | No Impact             |

**G. Vulnerable Community Assets** 

| Asset          | Impact   |
|----------------|--|
| People         | Little or no impact.   |
| Economy        | Subsiding/subsided business locations would be adversely affected.   |
| Infrastructure | Subsiding/subsided roads and other infrastructures would be adversely affected. Undergrond mines contain potentially contaminated water that may be released into the aquafer. |
| Structures     | No structures are located in known risk areas.   |

| Structure      | Inven- | Average   | At | Risk   | Dam | aged   | Dai | mages |
|----------------|--------|-----------|----|--------|-----|--------|-----|-------|
| Туре           | tory   | Value     | %  | Number | %   | Number | %   | Total |
| Residential    | 11,199 | \$204,704 |    | 0      |     | 0      |     | \$0   |
| Nonresidential | 1,075  | \$787,403 |    | 0      |     | 0      |     | \$0   |
| Critical       | 26     | \$450,000 |    | 0      |     | 0      |     | \$0   |

#### **Section VI – Mitigation Goals and Actions**

#### I. Overview

The Fayette County Mitigation Planning Team identified hazards of credible threat and analyzed their impact using qualitative and quantitative methods. The team used the *FEMA Local Mitigation Planning Handbook, March 2013,* as a guide for conducting analysis.

### II. Identification and Analysis Methodology

The Planning Team profiled each hazard. It collected and reviewed hazard information, assessed the impacts and the vulnerabilities of the community's assets. The team assigned risk factor values based on the criteria and adjusting factors established by the Ohio EMA.

The team then estimated structures at risk and associated damages.

#### III. Goals

The Planning Team selected the following mitigation goals:

- Reduce or eliminate impact of hazards on public safety, lives, property and infrastructure
- Provide timely warning
- Enhance emergency response capability
- Plan for safe development
- Create self sufficiency
- Increase public awareness

#### IV. Actions

The Planning Team then reviewed the forty actions from the previous mitigation plan, noted eight as duplicate actions and two as not mitigation actions and one as normal maintenance, identified five as completed, deleted twelve, and added four new actions.

| Goal/Action Goal/Action  | Status    | Note |  |  |
|--|-----------|------|--|--|
| Reduce or eliminate impact of hazards on public safety, lives, property and infrastructure   |           |      |  |  |
| Identify and map existing critical culverts and storm drainage ditches near residential  | Completed |      |  |  |
| areas, roadways and low-lying areas throughout the county.   |           |      |  |  |
| Install warning signage along roadways that are susceptible to flooding.   | Deleted   | 1    |  |  |
| Repair and replace bridges and levees that suffer damage from storm water.   | Deleted   | 1    |  |  |
| Elevate roads above base flood elevations.   | Deleted   | 1    |  |  |
| Install new infrastructure in areas susceptible to low level flooding and ponding, outside of the 100-year floodplain.   | Deleted   | 1    |  |  |
| Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers. | Unchanged |      |  |  |
| Develop and implement a tree trimming program to help prevent damage from falling limbs.   | Unchanged |      |  |  |
| Protect and restore natural flood mitigation features such as riverbanks, riparian buffers and vegetative buffers.   | Deleted   | 1    |  |  |
| Relocate or retrofit critical facilities located within floodplains.   | Deleted   | 1    |  |  |
| Mitigate water and wastewater treatment facilities located in flood hazard areas.  | Unchanged |      |  |  |
| Mitigate structures at risk  | Unchanged |      |  |  |
| Provide means for mass animal carcass disposal.  | Deleted   | 1    |  |  |
| Rehabilitate dams known to be of high hazard potential.  | New       |      |  |  |

| Goal/Action  | Status    | Note |
|--|-----------|------|
| Update dam Emergency Action Plans; update inundation data for dams without                 | New       |      |
| EAPs or no current inundation data   |           |      |
| Upgrade water treatment plant carbon process and upgrade disposal.                         | New       |      |
| Increase the size of sewage lagoons to reduce probability of overflow.                     | New       |      |
| Provide timely warning   |           |      |
| Implement a reverse-flow emergency notification system.                                    | Completed |      |
| Install/upgrade outdoor warning sirens.  | Unchanged |      |
| Provide NOAA All-Hazards Warning Radios for all critical facilities.                       | Unchanged |      |
| Upgrade the public safety countywide radio communications system.                          | Completed |      |
| Enhance emergency response capability  | , - , ,   |      |
| Establish a series of dry hydrants throughout the county.                                  | Unchanged |      |
| Construct additional water storage facility for emergency crop management and fire         | Unchanged |      |
| suppression.   | 3.1       |      |
| Partner with local environmental groups to make best use of areas prone to flooding        | Unchanged |      |
| that cannot be built upon.   |           |      |
| Plan for safe development  |           |      |

| Review, revise and adopt policies/ordinances to improve stormwater management.             | Unchanged |      |
| Create self sufficiency  |           |      |
| Identify/upgrade facilities to be shelters.  | Unchanged |      |
| Develop and maintain a system to identify vulnerable populations.                          | Completed |      |
| Install back-up generators for shelters and critical facilities.                           | Unchanged |      |
| Identify alternate potable water sources and develop a distribution system.                | Unchanged |      |
| Identify facilities for use as temporary facilities for patients with non-life-threatening | Completed |      |
| conditions to alleviate the overloading of medical facilities.                             |           |      |
| Develop a warehousing system for storing essential disaster supplies.                      | Unchanged |      |
| Provide designated locations/facilities to house displaced animals.                        | Unchanged |      |
| Develop and implement a volunteer management program.                                      | Unchanged |      |

| Goal/Action Goal/Action  | Status    | Note |
|--|-----------|------|
| Construct community safe rooms.                                | Unchanged |      |
| Construct residential safe rooms.                              | Unchanged |      |
| Increase public awareness                                      |           |      |
| Develop and implement an all-hazards public education program. | Unchanged |      |

Notes. Rationale for deleting actions:

- 1. Not feasible or currently applicable
- 2. Normal operations

#### V. Cost-Benefit Review

Cost-Benefit Review is used to determine the relative feasibility of mitigation actions, thus establishing a prioritized list. The Planning Team used *Using Benefit-Cost Review in Mitigation Planning – State and Local Mitigation Planning How-To Guide Number Five – FEMA 386-5, May\_2007*<sup>46</sup>, to conduct this review. Using qualitative methods (Method A), this Cost-Benefit Review methodology was emphasized in the prioritization process.

#### A. Review Benefits and Costs

This step is documented with each selected mitigation action. Refer to *Mitigation Action Analysis* section.

#### **B. Prioritize Actions**

The following summarizes the benefits and costs of each mitigation action and reflects the priority assigned by the Planning Team. Guiding criteria was:

- Impact on public safety (isolation and injuries)
- Impact on property damage
- Impact on other mitigation actions
- Acceptability of implementation by elected officials and voters
- Monetary costs

| Priority | Mitigation Action   | Benefits   | Costs            |
|----------|---|--|------------------|
| 1        | Install back-up generators for shelters and critical facilities.      | Decreased impact of utility outages Increased public safety  | \$50k x 2 sites  |
| 2        | Install/upgrade outdoor warning sirens.                               | Increased public safety<br>Increased<br>attractiveness to new<br>businesses, visitors<br>and residents | \$40k x 5 sirens |
| 3        | Develop and implement an all-hazards public education program.        | Increased public awareness and preparedness  | Staff costs      |
| 4        | Develop a warehousing system for storing essential disaster supplies. | Immediate access to disaster supplies Increased self sufficiency                                       | Staff costs      |

#### **Section VII – Mitigation Action Identification & Analysis**

- I. Goal: Reduce or eliminate impact of hazards on public safety, lives, property and infrastructure
  - A. Action: Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.

PriorityStart Date:End Date:Estimated Cost:Current Status:137/1/20206/30/2025UnknownUnchanged

Hazards Addressed: Dam Failure, Severe Summer Storms/Thunderstorms/Wind Storms/Hail, Flooding

Jurisdiction(s) Affected: Bloomingburg Village, Jeffersonville Village, Milledgeville Village, New Holland Village, Octa Village, Fayette County

Project Lead(s): Fayette County Engineer, Fayette County Soil and Water Conservation District

Funding Resource(s): Community Development Block Grant, Flood Mitigation Assistance Grant, Hazard Mitigation Grant Program, In-Kind (Work or Labor), Local Funds, Pre-Disaster Mitigation Grant

Mitigation Action Type(s): Stormwater, Reconstruction, Minor Localized Flood Reduction

| Structures - Access to Fire | Unknown        | Fewer at Risk  | Not Quantifiable |
| Suppression Water           | Number         |                |                  |

| Benefits                            | Costs            |
|-------------------------------------|------------------|
| Decreased structural damage by fire | \$500 x 10 sites |
| Decreased response time             |                  |
| Increased attractiveness to new     |                  |
| businesses and residents            |                  |

B. Action: Construct additional water storage facility for emergency crop management and fire suppression.

| Pric | ority | Start Date: | End Date: | Estimated Cost: | Current Status: |
|------|-------|-------------|-----------|-----------------|-----------------|
|      | 26    | 7/1/2020    | 6/30/2025 | \$500k          | Unchanged       |

Hazards Addressed: Droughts

Jurisdiction(s) Affected: Fayette County

Project Lead(s): Jurisdictional Fire Chiefs, Fayette County Soil and Water Conservation District

Funding Resource(s): Community Development Block Grant, Hazard Mitigation Grant Program, In-Kind (Work or Labor), Local Funds, Pre-Disaster Mitigation Grant, State Funds

Mitigation Action Type(s): Planning, Fire Suppression, Crop Resilience

| Vulnerability                                 | Before<br>Implementation | After Implementation | Difference       |
|---|--------------------------|----------------------|------------------|
| Structures - Access to Fire Suppression Water | Unknown<br>Number        | Fewer at Risk        | Not Quantifiable |
| Crops - Access to Water                       | Unknown<br>Amount        | Fewer at Risk        | Not Quantifiable |

| Benefits                  | Costs  |
|---------------------------|--------|
| Decreased crop loss       | \$500k |
| Decreased structural loss |        |

#### IV. Goal: Plan for safe development

A. Action: Partner with local environmental groups to make best use of areas prone to flooding that cannot be built upon.

| Priority | Start Date: | End Date: | Estimated Cost: | Current Status: |
|----------|-------------|-----------|-----------------|-----------------|
| 22       | 7/1/2020    | 6/30/2025 | Unknown         | Unchanged       |

Hazards Addressed: Flooding

Jurisdiction(s) Affected: Washington Court House City, Bloomingburg Village, Jeffersonville Village, Milledgeville Village, New Holland Village, Octa Village, Fayette County

Project Lead(s): Fayette County Commissioners, Mayors

Funding Resource(s): In-Kind (Work or Labor)

Mitigation Action Type(s): Planning

|                  | Before         | After          |             |
|------------------|----------------|----------------|-------------|
| Vulnerability    | Implementation | Implementation | Difference  |
| Community Assets | Unknown        | Fewer          | Less Impact |

| Benefits                    | Costs         |
|-----------------------------|---------------|
| Unity and synergy of effort | Agency buy-in |

B. Action: Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures.

| Priority | Start Date: | End Date: | Estimated Cost: | Current Status: |
|----------|-------------|-----------|-----------------|-----------------|
| 15       | 7/1/2020    | 6/30/2025 | Unknown         | Unchanged       |

Hazards Addressed: Earthquakes, Flooding, Tornado, Severe Summer Storms/Thunderstorms/Wind Storms/Hail

Jurisdiction(s) Affected: Washington Court House City, Bloomingburg Village, Jeffersonville Village, Milledgeville Village, New Holland Village, Octa Village, Fayette County

Project Lead(s): Fayette County Commissioners, Township Trustees, Mayors

Funding Resource(s): In-Kind (Work or Labor)

Mitigation Action Type(s): Planning

|                  | Before         | After          |             |
|------------------|----------------|----------------|-------------|
| Vulnerability    | Implementation | Implementation | Difference  |
| Community Assets | Unknown        | Fewer          | Less Impact |

| Benefits                           | Costs                                |
|------------------------------------|--------------------------------------|
| Increased public safety            | Elected official buy-in              |
| Increased attractiveness to new    | Public support                       |
| businesses, visitors and residents | Increased economic development costs |

# C. Action: Update the County Land Use Document to place greater restrictions on what can be built within the floodplain and to suggest many suitable alternative locations for mobile homes.

| Priority | Start Date: | End Date: | Estimated Cost: | Current Status: |
|----------|-------------|-----------|-----------------|-----------------|
| 19       | 7/1/2020    | 6/30/2025 | Unknown         | Unchanged       |

# **Section VIII – Supplemental Information**

# I. Mitigation Acronyms, Terms and Definitions

| Term                                      | Acronym | Description  |
|---|---------|--|
| Community Development Block Grant Program | CDBC    | The Community Development Block Grant program is a flexible program that provides communities with resources to address a wide range of unique community development needs.  |
| Community Asset                           |         | The people, structures, facilities, and systems that have value to the community   |
| Dam - Class I                             |         | Dams having a total storage volume greater than five thousand acre-feet or a height of greater than sixty feet shall be placed in class I. A dam shall be placed in class I when sudden failure of the dam would result in one of the following conditions:  (a) Probable loss of human life.  (b) Structural collapse of at least one residence or one commercial or industrial business.  Reference: OAC 1501:21-13-01(A)(1)   |
| Dam - Class II                            |         | Dams having a total storage volume greater than five hundred acre-feet or a height of greater than forty feet shall be placed in class II. A dam shall be placed in class II when sudden failure of the dam would result in at least one of the following conditions, but loss of human life is not probable.  (a) Disruption of a public water supply or wastewater treatment facility, release of health hazardous industrial or commercial waste, or other health hazards.  (b) Flooding of residential, commercial, industrial, or publicly owned structures. At the request of the dam owner, the chief may exempt dams from the criterion of this paragraph if the dam owner owns the potentially affected property.  (c) Flooding of high-value property. At the request of the dam owner, the chief may exempt dams from the criterion of this paragraph if the dam owner owns the potentially affected property.  (d) Damage or disruption to major roads including but not limited to interstate and state highways, and the only access to residential or other critical areas such as hospitals, nursing homes, or correctional facilities as determined by the chief.  (e) Damage or disruption to railroads or public utilities.  (f) Damage to downstream class I, II or III dams or levees, or other dams or levees of high value. Damage to dams or levees can include, but is not limited to, overtopping of the structure. At the request of the dam owner, the chief may exempt dams from the criterion of this paragraph if the dam owner owns the potentially affected property.  Reference: OAC 1501:21-13-01(A)(2) |
| Dam - Class III                           |         | Dams having a total storage volume greater than fifty acre-feet or a height of greater than twenty-five feet shall be placed in class III. A dam shall be placed in class III when sudden failure of the dam would result in at least one of the following conditions, but loss of human life is not probable.  (a) Property losses including but not limited to rural buildings not otherwise described in paragraph (A) of this rule, and class IV dams and levees not   |

|--|--------------|--|
| Term   | Acronym      | Description  |
|  |              | otherwise listed as high-value property in paragraph (A) of this rule. At the request of the dam owner, the chief may exempt dams from the criterion of this paragraph if the dam owner owns the potentially affected property. (b) Damage or disruption to local roads including but not limited to roads not otherwise listed as major roads in paragraph (A) of this rule. Reference: OAC 1501:21-13-01(A)(3)   |
| Dam - Class IV                               |              | Dams which are twenty-five feet or less in height and have a total storage volume of fifty acre-feet or less may be placed in class IV. When sudden failure of the dam would result in property losses restricted mainly to the dam and rural lands, and loss of human life is not probable, the dam may be placed in class IV. Class IV dams are exempt from the permit requirements of section 1521.06 of the Revised Code pursuant to paragraph (C) of rule 1501:21-19-01 of the Administrative Code.  Reference: OAC 1501:21-13-01(A)(4)   |
| Emergency<br>Management<br>Agency            | EMA          |  |
| Federal<br>Emergency<br>Management<br>Agency | FEMA         | FEMA's mission is to support our citizens and first responders to ensure that as a nation we work together to build, sustain and improve our capability to prepare for, protect against, respond to, recover from and mitigate all hazards.  |
| Hazards U.S.<br>Multi-Hazard                 | HAZUS-<br>MH | The Hazards U.S. Multi-Hazard is a nationally applicable standardized method that estimates potential losses from earthquakes, hurricane winds, and floods. HAZUS-MH uses state-of-the-art geographic information system (GIS) software to map and display hazard data and estimates of damage and economic loss to buildings and infrastructure.  |
| Impact                                       |              | The consequences or effects of a hazard on the community and its assets  |
| Mitigation                                   |              | Activities providing a critical foundation in the effort to reduce the loss of life and property from natural and/or manmade disasters by avoiding or lessening the impact of a disaster and providing value to the public by creating safer communities. Mitigation seeks to fix the cycle of disaster damage, reconstruction, and repeated damage. These activities or actions, in most cases, will have a long-term sustained effect. Mitigation measures may be implemented prior to, during, or after an incident. Mitigation measures are often informed by lessons learned from prior incidents. Mitigation involves ongoing actions to reduce exposure to, probability of, or potential loss from hazards. Measures may include zoning and building codes, floodplain buyouts, and analysis of hazard related data to determine where it is safe to build or locate temporary facilities. Mitigation can include efforts to educate governments, businesses, and the public on measures they can take to reduce loss and injury. |
| Modified Mercalli<br>Intensity Scale         |              | The Modified Mercalli Intensity value assigned to a specific site after an earthquake has a more meaningful measure of severity to the nonscientist than the magnitude because intensity refers to the effects actually experienced at that place.   |

| Term  | Acronym | Description  |
|---|---------|--|
|   |         | The lower numbers of the intensity scale generally deal with the manner in which the earthquake is felt by people. The higher numbers of the scale are based on observed structural damage.  |
| Natural Hazard  |         | Source of harm or difficulty created by a meteorological, environmental, or geological event   |
| National Flood<br>Insurance<br>Program                | NFIP    | The National Flood Insurance Program is aimed at reducing the impact of flooding on private and public structures. This is achieved by providing affordable insurance for property owners and by encouraging communities to adopt and enforce floodplain management regulations. These efforts help mitigate the effects of flooding on new and improved structures. Overall, the program reduces the socio-economic impact of disasters by promoting the purchase and retention of Risk Insurance in general, and National Flood Insurance in particular. |
| National Oceanic<br>and Atmospheric<br>Administration | NOAA    | Science, Service, and Stewardship. Mission: To understand and predict changes in climate, weather, oceans, and coasts, To share that knowledge and information with others, and To conserve and manage coastal and marine ecosystems and resources.  |
| National Weather<br>Service                           | NWS     | The National Weather Service provides weather, hydrologic, and climate forecasts and warnings for the United States, its territories, adjacent waters and ocean areas, for the protection of life and property and the enhancement of the national economy. NWS data and products form a national information database and infrastructure which can be used by other governmental agencies, the private sector, the public, and the global community.  |
| Ohio Department of Natural Resources                  | ODNR    |  |
| Per Capita  |         | Per unit of population.  |
| Repetitive Loss<br>Property                           |         | Any insurable building for which two or more claims of more than \$1,000 were paid by the National Flood Insurance Program (NFIP) within any rolling tenyear period, since 1978. The property may or may not be currently insured by the NFIP.   |
| Risk  |         | The potential for damage, loss, or other impacts created by the interaction of natural hazards with community assets.  |
| Risk Assessment                                       |         | Product or process that collects information and assigns values to risks for the purpose of informing priorities, developing or comparing courses of action, and informing decision making.  |
| Severe Repetitive<br>Loss Property                    |         | A residential property that is covered under an NFIP flood insurance policy and:  (a) That has at least four NFIP claim payments (including building and contents) over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or  (b) For which at least two separate claims payments (building payments only) have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building.  |

| Term  | Acronym | Description   |
|---|---------|---|
| Threat or Human-<br>Caused Incident                       |         | Intentional actions of an adversary, such as a threatened or actual chemical or biological attack or cyber event  |
| United States<br>Geological<br>Survey                     | USGS    | The USGS serves the Nation by providing reliable scientific information to describe and understand the Earth; minimize loss of life and property from natural disasters; manage water, biological, energy, and mineral resources; and enhance and protect our quality of life.  |
| United States Department of Housing and Urban Development | USHUD   | HUD's mission is to create strong, sustainable, inclusive communities and quality affordable homes for all. HUD is working to strengthen the housing market to bolster the economy and protect consumers; meet the need for quality affordable rental homes; utilize housing as a platform for improving quality of life; build inclusive and sustainable communities free from discrimination and transform the way HUD does business. |
| Vulnerability   |         | Characteristics of community assets that make them susceptible to damage from a given hazard  |

#### II. Meetings, Announcements and Correspondence

The Planning Team held public meetings to officially brief chief elected officials, gather data for inclusion in the updated plan, and make decisions on elements of the plan. The following are announcements and rosters of Planning Team meetings:

A. June 3, 2019 - Commissioners Endorsement of Mitigation Effort

| DESIGNATION OF APPLICANT'S AGENT   |
|--|
| RESOLUTION   |
|  |
| BE IT RESOLVED BY the Commissioners OF Fayette County, Ohio (Governing Body) (Public Entity)   |
| THAT Melissa Havens , Director of Emergency Management   |
| (Name of Incumbent) (Official Position)  |
| is hereby authorized to execute for and in behalf ofFavette County   |
| , a public entity established under the laws of the State of Ohio  |
| this application and to file it in the appropriate State office for the purpose of obtaining certain Federal financial assistance under the Disaster Relief Act (Public Law 288, 23rd Congress) or otherwise available from the President's Disaster Relief Fund.  |
| THAT Fayette County, a public entity established under the laws of the State of Ohio, hereby authorized its agent to provide to the State and to the Federal Emergency Management Agency (FEMA) for all matters pertaining to such Federal disaster assistance the assurances and agreements as listed in the Grant Agreement. |
| Passed and approved this, 20 19 .  |
| (Name and Title)  Ounty Commissioner  (Name and Title)  (Name and Title)  (Name and Title)  (Name and Title)   |
| CERTIFICATION  |
| I, Dana Foor , duly appointed and Clerk (Title)  |
| Fayette County Board of Commissioners, do hereby certify that the above is a true and correct copy of a  |
| resolution passed and approved by the Commissioners of Fayette County (Governing Body) of Public Entity)   |
| on the 3 <sup>rd</sup> day of June , 2019.   |
| Date:  |
| Administrative Clerk (Official Position) (Signature)   |
| *Name of Incumbent need not be provided in those cases where the governing body of the public entity desires to authorize any incumbent of the designated official position to represent it.   |
| FEMA Form 90-83, MAR 81  |

#### B. October 2, 2019 - Kick-Off Meeting

#### 1. Invitation

# Fayette County Emergency Management Agency Local Emergency Planning Committee Office of Homeland Security

133 S. Main Street, Suite L15, Washington C.H., Ohio 43160 Phone: (740) 335-8264 • Fax: (740) 333-0002 • Email: fayema@fayette-co-oh.com

August 26, 2019

Fayette County is beginning an update to the Hazard Mitigation Plan.

You are cordially invited to attend the kickoff planning meeting scheduled for Wednesday, October 2 at 10:00 a.m. The meeting will be held at the Center for Economic Opportunity, 101 E. East Street, Washington C.H., OH 43160.

A hazard mitigation plan is a strategic guidance document used by an entity to reduce future risk to life and property. A hazard mitigation plan has the following elements:

- A public participation process for bringing together diverse stakeholders in the jurisdiction(s) to provide an array of input into the plan.
- A risk assessment to identify the hazards, determine the people and property subject to those hazards, and estimate vulnerability,
- A mitigation strategy that contains goals, objectives and an action plan to implement priority mitigation actions that reduce risk,
- · A maintenance process to ensure the plan is reviewed, updated and does not sit idle, and
- An adoption requirement to ensure the participating jurisdictions support the plan.

#### Why you should attend this meeting:

- You are a vested member of this community, and your input could prove to be invaluable.
- Should you apply for federal grants to assist financially in addressing any item or issue that has been
  identified in this Plan as a "need," you will have a federally-approved document to support your financial
  request, which increases your likelihood of receiving said funding.
- Your attendance at this meeting will also be counted towards the County's "in-kind match" for the Grant
  used to cover the cost of the Contractor

This is a great opportunity to have your voice heard on behalf of your jurisdiction/agency with issues directly related to us locally. Please plan to attend this planning meeting. Feel free to contact my office with any additional questions or concerns you may have. I look forward to seeing you in October!

Take care,

Melissa Havens, Director

"Coordinating Emergency Services within Fayette County to protect Lives, Property, and the Environment by an all hazard approach of Mitigation, Preparedness, Response, and Recovery for Disasters and Emergencies"

#### C. August 27, 2019 - Public Note of Mitigation Plan Update

Fayette County Emergency Management Agency

Fayette County is beginning an update to the Hazard Mitigation Plan. A hazard mitigation plan is a strategic guidance document used by an entity to reduce future risk to life and property. A hazard mitigation plan has the following elements:

- A public participation process for bringing together diverse stakeholders in the jurisdiction(s) to provide an array of input into the plan.
- A risk assessment to identify the hazards, determine the people and property subject to those hazards, and estimate vulnerability,
- A mitigation strategy that contains goals, objectives and an action plan to implement priority mitigation actions that reduce risk,
- A maintenance process to ensure the plan is reviewed, updated and does not sit idle, and
- An adoption requirement to ensure the participating jurisdictions support the plan.

A current copy is available at the Carnegie Public Library in Washington Court House at the Adult Circulation Desk for public review, or you can find it online at the Fayette County EMA website: www.fayette-co-

oh.com/departments/emergency\_management\_agency under "Plans". Comments and suggestions can be made via email to Melissa.havens@fayette-co-oh.com, by phone 740-335-8264, or in person at the Plan Update Meeting scheduled for Wednesday, October 2, 2019 at 9am at the Center for Economic Opportunity, 101 E. East Street, Washington C.H., OH 43160.

**III. Mitigation Actions by Jurisdiction** 

| 111. 19 | Priority/Jurisdiction  Priority/Jurisdiction/Action  |
|---------|--|
|         | Fayette County   |
| 1       | Install back-up generators for shelters and critical facilities.   |
| 2       | Install/upgrade outdoor warning sirens.  |
| 3       | Develop and implement an all-hazards public education program.   |
| 4       | Develop a warehousing system for storing essential disaster supplies.                                    |
| 5       | Provide NOAA All-Hazards Warning Radios for all critical facilities.                                     |
| 6       | Establish a series of dry hydrants throughout the county.  |
| 7       | Identify/upgrade facilities to be shelters.  |
| 9       | Upgrade water treatment plant carbon process and upgrade disposal.                                       |
| 10      | Increase the size of sewage lagoons to reduce probability of overflow.                                   |
| 11      | Develop and implement a volunteer management program.  |
| 12      | Provide designated locations/facilities to house displaced animals.                                      |
| 13      | Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins,      |
| 10      | landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.       |
| 14      | Review, revise and adopt policies/ordinances to improve stormwater management.                           |
| 15      | Review and update laws and regulations to limit development in at risk areas and require minimum safe    |
|         | standards for structures.  |
| 16      | Identify alternate potable water sources and develop a distribution system.                              |
| 17      | Mitigate structures at risk  |
| 18      | Promote the construction and use of safe rooms by requiring construction of safe rooms in new schools,   |
|         | daycares, and nursing homes. Encouraging the construction and use of safe rooms in homes and shelter     |
|         | areas of manufactured home parks, fairgrounds, shop  |
| 19      | Update the County Land Use Document to place greater restrictions on what can be built within the        |
|         | floodplain and to suggest many suitable alternative locations for mobile homes.                          |
| 20      | Rehabilitate dams known to be of high hazard potential.  |
| 21      | Request update of Digital Flood Insurance Rate Maps (DFIRMS).  |
| 22      | Partner with local environmental groups to make best use of areas prone to flooding that cannot be built |
|         | upon.  |
| 23      | Construct community safe rooms.  |
| 24      | Develop and implement a tree trimming program to help prevent damage from falling limbs.                 |
| 25      | Update dam Emergency Action Plans; update inundation data for dams without EAPs or no current            |
| 200     | inundation data  |
| 26      | Construct additional water storage facility for emergency crop management and fire suppression.          |
| 27      | Construct residential safe rooms.  |

| 7        | Identify/upgrade facilities to be shelters.   |  |  |  |
| 8        | Mitigate water and wastewater treatment facilities located in flood hazard areas.                   |  |  |  |
| 11       | Develop and implement a volunteer management program.   |  |  |  |
| 12       | Provide designated locations/facilities to house displaced animals.                                 |  |  |  |
| 13       | Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, |  |  |  |
|          | landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.  |  |  |  |
| 20       | Rehabilitate dams known to be of high hazard potential.   |  |  |  |
| 25       | Update dam Emergency Action Plans; update inundation data for dams without EAPs or no current       |  |  |  |
|          | inundation data   |  |  |  |
|          | Droughts  |  |  |  |
| 3        | Develop and implement an all-hazards public education program.                                      |  |  |  |
| 6        | Establish a series of dry hydrants throughout the county.   |  |  |  |
| 16       | Identify alternate potable water sources and develop a distribution system.                         |  |  |  |
| 26       | Construct additional water storage facility for emergency crop management and fire suppression.     |  |  |  |
|          | Flooding  |  |  |  |
| 1        | Install back-up generators for shelters and critical facilities.                                    |  |  |  |
| 2        | Install/upgrade outdoor warning sirens.   |  |  |  |
| 3        | Develop and implement an all-hazards public education program.                                      |  |  |  |
| 4        | Develop a warehousing system for storing essential disaster supplies.                               |  |  |  |
| 5        | Provide NOAA All-Hazards Warning Radios for all critical facilities.                                |  |  |  |
| 7        | Identify/upgrade facilities to be shelters.   |  |  |  |
| 8        | Mitigate water and wastewater treatment facilities located in flood hazard areas.                   |  |  |  |
| 9        | Upgrade water treatment plant carbon process and upgrade disposal.                                  |  |  |  |
| 10       | Increase the size of sewage lagoons to reduce probability of overflow.                              |  |  |  |
| 11       | Develop and implement a volunteer management program.   |  |  |  |
| 12       | Provide designated locations/facilities to house displaced animals.                                 |  |  |  |
| 13       | Control surface stormwater to alleviate flooding by installing/upgrading existing detention basins, |  |  |  |
|          | landscaping to route stormwater away from roads and structures, installing/upgrading storm sewers.  |  |  |  |
| 14       | Review, revise and adopt policies/ordinances to improve stormwater management.                      |  |  |  |
| 15       | Review and update laws and regulations to limit development in at risk areas and require minimum    |  |  |  |
|          | safe standards for structures.  |  |  |  |
| 17       | Mitigate structures at risk   |  |  |  |
| 19       | Update the County Land Use Document to place greater restrictions on what can be built within the   |  |  |  |
|          | floodplain and to suggest many suitable alternative locations for mobile homes.                     |  |  |  |

| Priority        | Action  |  |  |  |
|-----------------|---|--|--|--|
| 21              | Request update of Digital Flood Insurance Rate Maps (DFIRMS).   |  |  |  |
| 22              | Partner with local environmental groups to make best use of areas prone to flooding that cannot be built upon.                  |  |  |  |
| 23              | Construct community safe rooms.   |  |  |  |
|                 | Earthquakes   |  |  |  |
| 1               | Install back-up generators for shelters and critical facilities.  |  |  |  |
| 2               | Install/upgrade outdoor warning sirens.   |  |  |  |
| 3               | Develop and implement an all-hazards public education program.  |  |  |  |
| 4               | Develop a warehousing system for storing essential disaster supplies.   |  |  |  |
| 5               | Provide NOAA All-Hazards Warning Radios for all critical facilities.  |  |  |  |
| 8               | Mitigate water and wastewater treatment facilities located in flood hazard areas.   |  |  |  |
| 11              | Develop and implement a volunteer management program.   |  |  |  |
| 12              | Provide designated locations/facilities to house displaced animals.   |  |  |  |
| 15              | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures. |  |  |  |
| 23              | Construct community safe rooms.   |  |  |  |
| Land Subsidence |   |  |  |  |
| 3               | Develop and implement an all-hazards public education program.  |  |  |  |
|                 | Pandemic  |  |  |  |
| 3               | Develop and implement an all-hazards public education program.  |  |  |  |
| 4               | Develop a warehousing system for storing essential disaster supplies.   |  |  |  |
| 11              | Develop and implement a volunteer management program.   |  |  |  |

## V. 2015 Mitigation Action Adjustments

|  | 2015 Goal/ Action | Disposition | 2020 Action |
|--|-------------------|-------------|-------------|
|--|-------------------|-------------|-------------|

Winter and Summer Storms: To educate the County's citizens to increase awareness of severe storms and where to seek safety during storm events, to provide adequate shelters where citizens can seek safety from severe weather, to improve the warning system and radio communications throughout the County, to expedite the clean up process through coordination and equipment acquisition, to maintain operations of critical facilities and emergency services and to reduce property damage caused by severe weather.

| of critical facilities and emergency services a   | nd to reduce pro                           | operty damage caused by severe weather.                                     |
|---|--|---|
| Install an inter-operable siren system that would alert residents of approaching severe weather or other emergencies.   | Unchanged<br>Merged                        | Install/upgrade outdoor warning sirens.                                     |
| Upgrade the radio communication system throughout the County for all public safety services   | Deleted<br>Duplicate<br>action -<br>Merged | Upgrade the public safety countywide radio communications system.           |
| Seek funding to acquire portable generators to loan out to critical facilities and shelters   | Deleted<br>Duplicate<br>action -<br>Merged | Install back-up generators for shelters and critical facilities.            |
| Provide/encourage NOAA weather radios for all critical facilities within the County.  | Unchanged<br>Merged                        | Provide NOAA All-Hazards Warning Radios for all critical facilities.        |
| Seek funding to purchase additional communication equipment for use by the EMA in communicating with relief workers.  | Deleted<br>Duplicate<br>action -<br>Merged | Upgrade the public safety countywide radio communications system.           |
| Provide back-up generators for critical facilities, including shelters, which need to maintain continuous power to protect human health and life.   | Unchanged                                  | Install back-up generators for shelters and critical facilities.            |
| Seek funding to provide an early warning system, such as reverse 9-1-1, to warn residents of emergency situations.  | Deleted<br>Duplicate<br>action -<br>Merged | Implement a reverse-flow emergency notification system.                     |
| Develop a public education program for infonning residents of the hazards associated with severe weather (i.e., medical conditions, driving conditions, and necessary post-event activity.)                                   | Deleted<br>Duplicate<br>action -<br>Merged | Develop and implement an all-hazards public education program.              |
| Provide an alternate potable water source In the event that existing water supplies are disrupted or contaminated.  | Unchanged                                  | Identify alternate potable water sources and develop a distribution system. |
| Upgrade existing and provide additional shelters where residents, especially the medically fragile, can seek safety from severe weather. Coordinate with the Red Cross to provide at least one shelter for each jurisdiction. | Unchanged                                  | Identify/upgrade facilities to be shelters.                                 |

| Conduct outreach activities to increase awareness of tornado risk   | Deleted<br>Duplicate<br>action -<br>Merged  | Develop and implement an all-hazards public education program.  |  |  |
| Develop a warehousing complex for storing essential disaster supplies (i.e., food, clothing, medical supplies), as well as processing donations, that would be distributed to shelters during and after an event.   | Deleted<br>Duplicate<br>action -<br>Merged  | Develop a warehousing system for storing essential disaster supplies.   |  |  |
| Develop a public education program for informing residents of the hazards associated with tornadoes, such as medical conditions and driving conditions, as well as what to do after an event Occurs.  | Deleted<br>Duplicate<br>action -<br>Merged  | Develop and implement an all-hazards public education program.  |  |  |

| rayette County Natural Hazards Mitigation Plan   |  | June 2020   |
|--|--|---|
| 2015 Goal/ Action  | Disposition                                | 2020 Action   |
| Protect Power Lines and infrastructure by inspecting utility poles to ensure they meet specifications and are wind resistant, burying power lines to provide uninterrupted power after severe winds, considering both maintenance and repair issues and upgrading overhead utility lines (e.g., adjust utility pole sizes, utility pole span Widths, and/or line strength).  | Unchanged                                  | Inspect utility poles to ensure they meet specifications and are wind resistant; bury power lines                               |
| Promote or Require Site and Building Design Standards to Minimize Wind Damage.   | Deleted<br>Duplicate<br>action -<br>Merged | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures. |
| Seek funding to increase manpower and equipment for Townships and Villages of Fayette Count for debris removal.  | Deleted<br>Not a<br>mitigation<br>action   |   |
| Provide means for mass animal carcass disposal to prevent spread of disease after a severe weather event.  | Deleted<br>Duplicate<br>action -<br>Merged | Provide means for mass animal carcass disposal.   |
| Provide permanent shelters for residents of mobile home parks and campgrounds, where citizens may seek safety.   | Deleted<br>Duplicate<br>action -<br>Merged | Identify/upgrade facilities to be shelters.   |
| Developing and maintaining a database to track community vulnerability to severe wind.   | Unchanged                                  | Develop and maintain a system to identify vulnerable populations.   |
| Monitor Mitigation Plan Implementation by forming a plan implementation steering committee to monitor progress on local mitigation actions. Include a mix of representatives from neighborhoods, local businesses, and local government. Also by preparing a plan implementation monitoring schedule and outlining roles for those responsible for monitoring (i.e., local departments, agencies, and committees). | Deleted<br>Not a<br>mitigation<br>action   |   |
| Require or encourage wind engineering measures and construction techniques.  | Deleted<br>Duplicate<br>action -<br>Merged | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures. |
| Seek funding to restore historical sites if they suffer severe damage from a tornado event.  | Deleted<br>Not a<br>mitigation<br>action   |   |

| Fayette County Natural Hazards Mitigation Plan  |  | June 2020   |  |
|---|--|---|--|
| 2015 Goal/ Action   | Disposition                                | 2020 Action   |  |
| Use tax incentives and disincentives to promote hazard mitigation for new development and retrofitting.   | Deleted<br>Duplicate<br>action -<br>Merged | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures. |  |
| Floods: To educate the County's citizens to increase awareness of flooding and where to seek safety during flood events, to provide adequate shelters where citizens can seek safety from severe weather and flooding, to ilnprove the warning system and radio communications throughout the County, to expedite |  |   |  |

the clean up process through coordination and equipment acquisition, to maintain operations of critical facilities and emergency services and to reduce property damage caused by severe weather and flooding.

| racilities and emergency services and to redu   | T  |   |
|---|--|---|
| Provide an early warning system, such as reverse 9-1-1, to warn residents of emergency situations.  | Unchanged                                  | Implement a reverse-flow emergency notification system.   |
| Upgrade the radio communications system throughout the county for all public safety services.   | Unchanged                                  | Upgrade the public safety countywide radio communications system.   |
| Limit or restrict development in floodplains.   | Unchanged                                  | Review and update laws and regulations to limit development in at risk areas and require minimum safe standards for structures. |
| Develop apublic education program for informing residents of the hazrds assicoated with severe weather and flooding (i.e., medical conditions, driving conditions and necessary post-vent activity.)                    | Deleted<br>Duplicate<br>action -<br>Merged | Develop and implement an all-hazards public education program.  |
| Place signs of flooding such as "high water" and "road prone to flooding".  | Unchanged                                  | Install warning signage along roadways that are susceptible to flooding.  |
| Identify and provide warning signage or roadway markings for roadways that are susceptible to repeated flooding regardless of the amount of rainfall.   | Deleted<br>Duplicate<br>action -<br>Merged | Install warning signage along roadways that are susceptible to flooding.  |
| Develop a public education program for informing residents about the benefits of having NOAA radios and Family Disaster Plans, which will help them better respond to an emergency situation.                           | Deleted<br>Duplicate<br>action -<br>Merged | Develop and implement an all-hazards public education program.  |
| Conduct regular maintenance for drainage systems and flood control structures.  | Deleted<br>Day-to-day<br>activity          |   |
| Upgrade existing and provide additional shelters where residents, especially the medically fragile, can seek safety from flooding. Coordinate with the Red Cross to provide at least one shelter for each jurisdiction. | Deleted<br>Duplicate<br>action -<br>Merged | Identify/upgrade facilities to be shelters.   |
| Relocate or retrofit the eight (8) critical facilities within floodplain to keep them in operation during flooding events.  | Unchanged                                  | Relocate or retrofit critical facilities located within floodplains.  |

| prevents high-impact development and likely  |                       |   |
| pollution sources in areas deemed vulnerable                                       |                       |   |
| under DRASTIC, and a zoning code to  |                       |   |
| implement and enforce this policy.   |                       |   |
| Ensure the ethanol plant continues to operate                                      |                       |   |
| in compliance of their facility.   |                       |   |
| New facilities to report what hazardous  |                       |   |
| materials are being handled onsite.  |                       |   |

| 2015 Goal/ Action   | Disposition | 2020 Action |
|---|-------------|-------------|
| Check the amount of hazardous materials onsite according to regulations.  |             |             |
| Create or update a land use plan that proscribes and/or simply promote agricultural runoff reduction measures, e.g. riparian zones, ram gardens, etc. |             |             |
| Keep rails properly maintained on-site.   |             |             |
| Prohibit all forms of development on the Pipelines' right-of-way.   |             |             |
| Educate the public about the dangers of pipelines.  |             |             |
| Enact alternating lawn watering days ordinance for non-agricultural properties.   |             |             |
| Reduce spillage of agricultural plants and feed on-site.  |             |             |
| Recycle any byproducts from the ethanol production for alternative uses.  |             |             |
